Upright The Evolutionary Key To Becoming Human:

Upright Craig Britton Stanford,2003 A distinguished anthropologist explores the complex mysteries of human evolution in a study that examines how human ancestors learned to walk upright arguing that bipedalism even more than a large brain or a facility with language played a pivotal role in the development of humankind [Encyclopedia of Anthropology](#) H. James Bix,2006 Focuses on physical social and applied anthropology archaeology linguistics and symbolic communication Topics include hominid evolution primate behaviour genetics ancient civilizations cross cultural studies and social theories

Restless Creatures Matt Wilkinson,2016-02-23 From flying pterodactyls to walking primates the story of life as told through the evolution of locomotion Most of us never think about how we get from one place to another For most people putting one foot in front of the other requires no thought at all Yet the fact that we and other species are able to do so is one of the great triumphs of evolution To truly understand how life evolved on Earth it is crucial to understand movement Restless Creatures makes the bold new argument that the true story of evolution is the story of locomotion from the first stirrings of bacteria to the amazing feats of Olympic athletes By retracing the four billion year history of locomotion evolutionary biologist Matt Wilkinson shows how the physical challenges of moving from place to place when coupled with the implacable logic of natural selection offer a uniquely powerful means of illuminating the living world Whales and dolphins look like fish because they have been molded by the constraints of underwater locomotion The unbending physical needs of flight have brought bats birds and pterodactyls to strikingly similar anatomies Movement explains why we have opposable thumbs why moving can make us feel good how fish fins became limbs and even why classic fiction notwithstanding there are no flying monkeys nor animals with wheels Even plants aren't immune from locomotion's long reach their seeds pollen and very form are all determined by their aptitude to disperse From sprinting cheetah to spinning maple fruit soaring albatross to burrowing worm crawling amoeba to running human all are the way they are because of how they move There is a famous saying nothing in biology makes sense unless in the light of evolution As Wilkinson makes clear little makes sense unless in the light of locomotion A powerful yet accessible work of evolutionary biology Restless Creatures is the essential guide for understanding how life on Earth was shaped by the simple need to move from point A to point B **Baby Meets World**

Nicholas Day,2013-04-02 A dynamic new story about how babies make their way in the world and how grown ups have tried to make sense of these tiny inscrutable beings As a new parent Nicholas Day had some basic but confounding questions Why does my son find the straitjacket of his swaddling blanket comforting and not terrifying How can he never meet a developmental norm and still be OK And when will he stop sucking my finger So he went digging for answers They were not what he expected Drawing on a wealth of perspectives scientific historical cross cultural personal Baby Meets World is organized around the mundane activities that dominate the life of an infant sucking smiling touching toddling From these everyday activities Day weaves together an account that is anything but ordinary a fresh surprising story both weird and

wondrous about our first experience of the world Part hidden history of parenthood part secret lives of babies Baby Meets World steps back from the moment to moment chaos of babydom It allows readers to see infancy anew in all its strangeness and splendor *Eidos* ,2004 *Scientific American* ,2004 *The First Human* Ann Gibbons,2007-04-10 An account of the search for the missing link between humans and apes journeys into the competitive world of fossil hunting and the lives of competing scientists determined to uncover the mysteries of human evolution **Natural History** ,2003 **Choice** ,2004 Evolution of Communicative Flexibility D. Kimbrough Oller,Ulrike Griebel,2008 Experts investigate communicative flexibility in both form and usage of signals as the foundation of the evolution of complex communication systems including human language The evolutionary roots of human communication are difficult to trace but recent comparative research suggests that the first key step in that evolutionary history may have been the establishment of basic communicative flexibility the ability to vocalize freely combined with the capability to coordinate vocalization with communicative intent The contributors to this volume investigate how some species particularly ancient hominids broke free of the constraints of fixed signals actions that were evolved to communicate but lack the flexibility of language a newborn infant s cry for example always signals distress and has a stereotypical form not modifiable by the crying baby Fundamentally the contributors ask what communicative flexibility is and what evolutionary conditions can produce it The accounts offered in these chapters are notable for taking the question of language origins farther back in evolutionary time than in much previous work Many contributors address the very earliest communicative break of the hominid line from the primate background others examine the evolutionary origins of flexibility in for example birds and marine mammals The volume s interdisciplinary theoretical perspectives illuminate issues that are on the cutting edge of recent research on this topic Contributors St phanie Barbu Curt Burgess Josep Call Laurance Doyle Julia Fischer Michael Goldstein Ulrike Griebel Kurt Hammerschmidt Sean Hanser Martine Hausberger Laurence Henry Allison Kaufman Stan Kuczaj Robert F Lachlan Brian MacWhinney Radhika Makecha Brenda McCowan D Kimbrough Oller Michael Owren Ron Schusterman Charles T Snowdon Kim Sterelny Beno t Test Gert Westermann *Forthcoming Books* Rose Arny,2003 **American Book Publishing Record** ,2004 **Human Origins** Rob DeSalle,Ian Tattersall,2008 Describes how mapping the human genome has aided paleoanthropologists in their study of ancient bones used to explore human origins from the earliest humans bipedal apes up to Martin Pickford s Millennium Man Becoming Human Ian Tattersall,1999 Explores the evolution of humankind who we are where we came from and where we are going **What Does it Mean to be Human?** Richard Potts,Christopher Sloan,2010 This generously illustrated book tells the story of the human family showing how our species physical traits and behaviors evolved over millions of years as our ancestors adapted to dramatic environmental changes In What Does It Means to Be Human Rick Potts director of the Smithsonian s Human Origins Program and Chris Sloan National Geographic s paleoanthropolgy expert delve into our distant past to explain when why and how we acquired the unique biological and cultural qualities that govern our most fundamental

connections and interactions with other people and with the natural world Drawing on the latest research they conclude that we are the last survivors of a once diverse family tree and that our evolution was shaped by one of the most unstable eras in Earth s environmental history The book presents a wealth of attractive new material especially developed for the Hall s displays from life like reconstructions of our ancestors sculpted by the acclaimed John Gurche to photographs from National Geographic and Smithsonian archives along with informative graphics and illustrations In coordination with the exhibit opening the PBS program NOVA will present a related three part television series and the museum will launch a website expected to draw 40 million visitors *Earth Sciences History* ,2005 *The Writers Directory* ,2013 **On Becoming Human** Arthur H. Niehoff,1994 Presents such info bits as what makes us different from other animals what behavior is quintessentially human and why men like to eat steak more than women do Discusses the past and how it will affect the future **Book Review Index** ,2004 Every 3rd issue is a quarterly cumulation **Evolutionary Psychology** Matthew Rossano,2003 Written in a lively and engaging manner this new work places evolutionary psychology within the broad sweep of our primate heritage and the full scope of our evolutionary story Beginning with the basics of evolution the book first unpacks the far ranging saga of human evolution then moves on to examine motor behavior and emotions sexual behavior and mate selection and higher cognition
