## **Urban Transportation Financing:**

Urban Transportation Financing Mark w. Frankena,1982-12-15 This is an economic analysis of pricing and subsidy policies for urban roads and urban public transit in Ontario Professor Frankena demonstrates the benefits of evaluating the economic merits of policy alternatives and attempts to determine whether existing policies waste resources or lead to undesirable income transfers among different groups in the population He concludes that resources are being wasted because the use of urban roads is substantially underpriced during periods of peak demand He also finds that while there are sound economic justifications for substantial public transit subsidies the allocation of subsidies by the Ontario government on the basis of capital expenditures can be expected to waste resources as can the maximization of ridership which is likely to lead to detrimental fare and service policies In conclusion Frankena suggests improvements in the systems for charging people for the use of roads and public transit and in the ways that governments provide subsidies

*Sustainable Urban Transport Financing from the Sidewalk to the Subway* Arturo Ardila-Gomez,Adriana Ortegón-Sánchez,2015-12-31 Urban transport systems are essential for economic development and improving citizens quality of life To establish high quality and affordable transport systems cities must ensure their financial sustainability to fund new investments in infrastructure while also funding maintenance and operation of existing facilities and services However many cities in developing countries are stuck in an underfunding trap for urban transport in which large up front investments are needed for new transport infrastructure that will improve the still small scale and perhaps poor quality systems but revenue is insufficient to cover maintenance and operation expenses let alone new investment projects The urban transport financing gap in these cities is further widened by the implicit subsidies for the use of private cars which represent a minority of trips but contribute huge costs in terms of congestion sprawl accidents and pollution Using an analytical framework based on the concept of Who Benefits Pays 24 types of financing instruments are assessed in terms of their social economic and environmental impacts and their ability to fund urban transport capital investments operational expenses and maintenance Urban transport financing needs to be based on an appropriate mix of complementary financing instruments In particular for capital investments a combination of grants from multiple levels of government and loans together with investments through public private partnerships could finance large projects that benefit society Moreover the property tax emerges as a key financing instrument for capital operation and maintenance expenses By choosing the most appropriate mix of financing instruments and focusing on wise investments cities can design comprehensive financing for all types of urban transport projects using multi level innovative revenue sources that promote efficient pricing schemes increase overall revenue strengthen sustainable transport and cover capital investments operation and maintenance for all parts of a public transport system from the sidewalk to the subway
