Urban Cliff Revolution:

The Urban Cliff Revolution Douglas William Larson, 2004 modern humans are still cave men in the sense that our habitations and companion species are the very ones that we formed functional relationships with more than a million years ago In the tradition of Stephen Jay Gould E O Wilson David Quammen Ian Tattersall and Wade Davis five Canadian scientists compare the modern high rise towers of our urban landscape to the cave and cliffside dwellings of our ancient ancestors and conclude that the construction of our sophisticated habitats owes much to the cave men and cave women of our past With implications in fields as diverse as architecture agriculture and even aspects of the origins of art the authors of this compelling and sometimes controversial work challenge conventional thinking on separate topics such as evolution history and ecology by suggesting a single premise that binds these ideas together that cliffs and rock outcrops have played a vital role in the origin evolution and development of the entire human habitat that the ecological similarities between ancestral human habitats and modern ones over a period of at least one million years provide a brand new perspective on what it means to be human *Urban Ecology* Jari Niemelä, Jürgen H. Breuste, Glenn Guntenspergen, Nancy E. McIntyre, Thomas Elmqvist, Philip James, 2011-11-17 Urbanization is a global phenomenon that is increasingly challenging human society It is therefore crucially important to ensure that the relentless expansion of cities and towns proceeds sustainably Urban ecology the interdisciplinary study of ecological patterns and processes in towns and cities is a rapidly developing field that can provide a scientific basis for the informed decision making and planning needed to create both viable and sustainable cities Urban Ecology brings together an international team of leading scientists to discuss our current understanding of all aspects of urban environments from the biology of the organisms that inhabit them to the diversity of ecosystem services and human social issues encountered within urban landscapes The book is divided into five sections with the first describing the physical urban environment Subsequent sections examine ecological patterns and processes within the urban setting followed by the integration of ecology with social issues The book concludes with a discussion of the applications of urban ecology to land use planning The emphasis throughout is on what we actually know as well as what we should know about the complexities of social ecological systems in urban areas in order to develop urban ecology as a rigorous scientific discipline **Urban Ecosystems** Robert A. Francis, Michael A. Chadwick, 2013 With over half of the global human population living in urban regions urban ecosystems may now represent the contemporary and future human environment This book aims to review what is currently known about urban ecosystems in a short and approachable text that will serve as a key resource for teaching and learning related to the urban environment [The Routledge Handbook of Urban Ecology](#) Ian Douglas, P M L Anderson, David Goode, Michael C. Houck, David Maddox, Harini Nagendra, Puay Yok Tan, 2020-12-15 This second edition covers recent developments around the world with contributors from 33 different countries It widens the handbook's scope by including ecological design consideration of cultural dimensions of the use and conservation of urban nature the roles of

government and civil society and the continuing issues of equity and fairness in access to urban greenspaces New features include an emphasis on the biophilic design of homes and workplaces demonstrating the value of nature in order to counter the still prevalent attitude among many developers that nature is a constraint rather than a value The volume explores great practical achievements that have occurred since the first edition with many governments increasingly recognizing and legislating on urban nature and green infrastructure matters since cities play a major role in adapting to change particularly to climate crisis New topics such as the ecological role of light at night and human microbiota in the urban ecosystem are introduced Additional attention is given to food production in cities particularly the multiple roles of urban agriculture and household gardens in different contexts from wealthy communities to the poorest informal settlements in deprived communities The emphasis is on demonstrating what can be achieved and what is already being done The book aims to help scholars and graduate students by providing an invaluable and up to date guide to current urban ecological thinking across the range of disciplines such as geography ecology environmental science studies planning and urban studies that converge in the study of towns and cities and urban design and living It will also assist practitioners and civil society members in discovering the ways different specialists and thinkers approach urban nature

Urban Ecology Kevin J. Gaston,2010 This is the urban century in which for the first time the majority of people live in towns and cities Understanding how people influence and are influenced by the green component of these environments is therefore of enormous significance Providing an overview of the essentials of urban ecology the book begins by covering the vital background concepts of the urbanisation process and the effect that it can have on ecosystem functions and services Later sections are devoted to examining how species respond to urbanisation the many facets of human ecology interactions and the issues surrounding urban planning and the provision of urban green spaces Drawing on examples from urban settlements around the world it highlights the progress to date in this burgeoning field as well as the challenges that lie ahead Provided by publisher

Wild Urban Plants of the Northeast Peter Del Tredici,2020-03-15 This field guide is useful for trained ecologists botanists and naturalists and is accessible to anyone else who wonders what is sprouting up from that sidewalk crack or in that corner of their suburban garden Rhodora In this field guide to the future esteemed Harvard University botanist Peter Del Tredici unveils the plants that will become even more dominant in urban environments under projected future environmental conditions These plants are the most important and most common plants in cities Learning what they are and the role they play he writes will help us all make cities more livable and enjoyable With more than 1000 photos readers can easily identify these powerful plants Learn about the fascinating cultural history of each plant

Ontario's Old-growth Forests Michael Henry,Peter Quinby,2010 Who would have thought that dwarf cedar trees growing on the Niagara Escarpment could live to be nearly 2000 years old Or that the small bonsai cedars lining the shorelines of the Canadian shield measure their ages in centuries Old growth pine trees in Temagami are often over 10 stories tall but these are young sprouts compared to trees of yesteryear which were as

much as 20 stories high Ontario's old growth forests are fantastical and mysterious but who knows where to find one Most people in this province live within an hour's drive of an old growth forest but do not know it The ecology of these stands is engrossing Fire scars on these trees for example provide an indisputable record of forest fire activity in Ontario Small hemlock saplings over 100 years old have been growing at infinitesimal rates waiting for a gap to open in the forest canopy
