Urban Flood Management Andras Szollosi-Nagy, Chris Zevenbergen, 2018-02-06 Over the last decades the world has witnessed a growing number of floods in urban areas Climate change and rapid urbanization will exacerbate this trend Flooding incidents in urbanized catchments and low lying areas such as polders can lead to great public concern and anxiety and their economical impact is severe Apart from well known flood prevention strategies new approaches to the accommodation of floods are needed to create robust and sustainable solutions that enable us to cope with the ever increasing urban pressure on flood prone areas and the uncertainties created by climate change Urban Flood Management comprises a multidisciplinary survey of recent developments in this field Subjects like spatial and urban planning flood insurance flood resilience flood proofing techniques risk perception and preparedness and flood forecasting are treated by authorities from Brazil India the USA and Europe Urban Flood Management will provide anyone active in the fields of water risk and urban management with the latest information and insights that were obtained with a global and multidisciplinary approach Cities and Flooding Abhas K. Jha, Robin Bloch, Jessica Lamond, 2012-02-13 Urban flooding is an increasing challenge today to the expanding cities and towns of developing countries This Handbook is a state of the art user friendly operational guide that shows decision makers and specialists how to effectively manage the risk of floods in rapidly urbanizing settings and within the context of a changing climate **Advances in Urban Flood Management** Richard

Ashley, Stephen Garvin, Erik Pasche, Andreas Vassilopoulos, Chris Zevenbergen, 2007-02-01 One of the effects of global climate change is the increasing variability of extreme flood events and cyclones Current measures to mitigate flood impacts particularly in the urban environment are based on previously planned flood risk intervals and no longer provide sufficient protection Being prepared for unexpected changes and extreme flood events asks for a paradigm shift in current strategies to avoid and manage flood disasters In order to stem the increasing impact of urban floods a major rethink of current planning and flood management policies and practice is required taking into account different spatial and temporal scales This book addresses a broad spectrum of relevant issues in the emerging field of urban flood management It may act as a stimulus for further research and development in urban flood management while informing and engaging stakeholders in the promotion of integrated and cooperative approaches in water management An interdisciplinary approach which will be of interest to all those who are active in water risk and urban management *Urban Flood Management* Chris Zevenbergen, Adrian

Framework for Dynamic Modelling of Urban Floods at Different Topographical Resolutions
SOLOMON D. SEYOUM,2018-09-27 Urban flood risks and their impacts are expected to increase as urban development in flood prone areas continues and rain intensity increases as a result of climate change while aging drainage infrastructures limit the drainage capacity in existing urban areas Flood mitigation strategies are required as part of sound urban flood management plans to assess flood risk and identify technically feasible and cost effective options to reduce the risk Central to the development of flood mitigation strategies is the efficient prediction of flood propagation characteristics in urban areas Detailed predictions of flood flows in urban areas require the use of high resolution topographic data However due to computational demand topographic data is often generalised to a more manageable resolution and floodplain models are built at much coarser resolutions The research presented in this thesis addresses the problem of capturing small scale features in coarse resolution urban flood models with the aim of improving flood forecasts in geometrically complex urban environments The approach adopted in the research used a two dimensional surface flow modelling system that can extract and incorporate useful information available in high resolution topographic data into coarse grid models The thesis also presents modelling of the complex interaction between surcharged sewer and flows associated with urban flooding and incorporation of infiltration process in surface flow modelling tools Case study results showed that the incorporating volume depth and flow area depth relationships extracted from high resolution topographic data significantly improved the results of coarse grid urban flood models while taking the advantage of reduced computational time to ensure efficient prediction of urban flood characteristics
