Working Minimalism Current Studies In Linguistics:

Working Minimalism Samuel David Epstein, Norbert Hornstein, 1999 Essays present explicit syntactic analyses that adhere to programmatic minimalist guidelines The essays in this book present explicit syntactic analyses that adhere to programmatic minimalist guidelines Thus they show how the guiding ideas of minimalism can shape the construction of a new more explanatory theory of the syntactic component of the human language faculty Contributors Zeljko Boskovic Samuel David Epstein Robert Freidin Erich M Groat Norbert Hornstein Hisatsugu Kitahara Howard Lasnik Roger Martin Jairo Nunes Norvin Richards Juan Uriagereka Amy Weinberg Current Studies in Linguistics No 32 The Copy Theory of Movement Norbert Corver, Jairo Nunes, 2007 This volume brings together papers which address issues regarding the copy theory of movement According to this theory a trace is a copy of the moved element that is deleted in the phonological component but is available for interpretation at Logical Form Thus far the bulk of the research on the copy theory has mainly focused on interpretation issues at LF The consequences of the copy theory for syntactic computation per se and for the syntax phonology mapping in particular have received much less attention in the literature despite its crucial relevance for the whole architecture of the model As a contribution to fill this gap this volume congregates recent work that deals with empirical and conceptual consequences of the copy theory of movement for the inner working of syntactic computations within the Minimalist Program with special emphasis on the syntax phonology mapping *Local Modelling of Non-Local Dependencies in Syntax* Artemis Alexiadou, Tibor Kiss, Gereon Müller, 2012-12-06 Syntactic dependencies are often non local They can involve two positions in a syntactic structure whose correspondence cannot be captured by invoking concepts like minimal clause or predicate argument structure Relevant phenomena include long distance movement long distance reflexivization long distance agreement control non local deletion long distance case assignment consecutio temporum extended scope of negation and semantic binding of pronouns A recurring strategy pursued in many contemporary syntactic theories is to model cases of non local dependencies in a strictly local way by successively passing on the relevant information in small domains of syntactic structures The present volume brings together eighteen articles that investigate non local dependencies in movement agreement binding scope and deletion constructions from different theoretical backgrounds among them versions of the Minimalist Program HPSG and Categorical Grammar and based on evidence from a variety of typologically distinct languages This way advantages and disadvantages of local treatments of non local dependencies become evident Furthermore it turns out that local analyses of non local phenomena developed in different syntactic theories spanning the derivational declarative divide often may not only share identical research questions but also rely on identical research strategies **Linguistic Variation Issues: Case and Agreement in Northern Russian Participial Constructions** Civardi, Antonio, 2016-10-12 This study offers a novel approach to a longstanding problem in Slavic Linguistics the formal representation of the Northern Russian participial constructions in notation Unlike previous works

the methodological stance adopted by the author focuses on singling out all the relevant patterns of variation and on pursuing a unified explanation for them The key to the solution of the puzzle is the idea that the participial affix *n t* and the agreement inflections are not just pieces of morphology inserted post syntactically but true heads that enter the computation and are able to manipulate the argumental roles of the verb and to check the EPP The author's proposal is properly framed in the context of current debate on interlanguage variation

[Chomsky's Minimalism](#) Pieter A. M. Seuren, 2004-08-26 Noam Chomsky's current theory published in 1995 is known as The Minimalist Program and has been presented as his crowning achievement Minimalism has spawned in linguistics an entire research program despite being fundamentally misguided according to distinguished linguist and philosopher of language Pieter Seuren Seuren's accessible and spirited attack argues that the Minimalist Program is deeply flawed Seuren points to the original acrimonious split in the 1960s and 1970s between Chomsky's generative grammar and the alternative generative semantics proposed by his followers and argues that the latter theory was sounder and unfairly suppressed Seuren maintains that this suppression and the cult surrounding Chomsky and Minimalism more generally has done great damage to linguistics by impairing open discussion of empirical issues and excluding valid alternatives

[A Computational Approach to the Syntax of Displacement and the Semantics of Scope](#) Andrea Christina Unger, 2010 This dissertation is about the syntax and semantics of non local dependencies It focuses on wh displacement and operator scope and addresses the challenge they pose to

theoretical linguistics How are form and meaning related and to which extent do syntax and semantics operate in parallel A common approach of formal grammar theories is to assume that displacement and scope construal go hand in hand and consequently to impose a strict correspondence between syntax and semantics This approach is challenged however by a considerable amount of cases where the syntactic position of an operator expression does not coincide with its semantic scope position This dissertation therefore pursues the opposite approach It argues that syntactic displacement and semantic scope taking do not interact at all The overall picture that is developed is that grammar consists of two parts a core system for establishing local dependencies with syntax and semantics operating in parallel and extensions to this core system for establishing non local dependencies with syntax and semantics operating independently In developing this picture it is shown that a substantial amount of data such as pronunciation in wh clusters order preservation with multiple displacement remnant movement and freezing as well as different scopal behavior can indeed be accounted for with a syntax and semantics that are largely independent from one another
