The Oxidative Balance:

The Oxidative Balance David A. Leaf, Peter A. Glassman, 2000-01-01 *Understanding Obesity to Determine the Best Therapeutic Option: From Lifestyle Interventions to Therapies* Evelyn Frias-Toral, Jorge Carriel-Mancilla, Florencia Ceriani, Almino Ramos, 2025-02-21 We are currently facing an obesity pandemic that affects individuals of all age groups geographic areas and social status among others Thus it is essential to generate high quality scientific evidence to better understand this pathology its risk factors and its treatments Several modifiable and non modifiable risk factors for the development of obesity have been identified It has been demonstrated that obese patients have an increased risk of acquiring arterial hypertension diabetes dyslipidemia cardiovascular diseases cancer and other chronic conditions In order to take efficient actions to reverse or prevent these complications it is also crucial to delve into body composition lean mass fat bone mass and sarcopenia in patients with obesity In recent months there have been developments in pharmacological therapies using GLP 1 GIP and glucagon agonists which seem to change the rules of the game regarding therapeutic decision making in these patients worldwide However surgical techniques such as sleeve gastrectomy and Roux en Y gastric bypass continue to be the most effective and definitive interventions to achieve adequate weight loss in patients with obesity Despite the pharmacological development none of the clinical trials have shown that the operated patients reach more than 30% of the total body weight as with bariatric surgery techniques Furthermore it is fundamental to analyze the impact of diverse therapeutic non surgical and non pharmacological options to address obesity such as cognitive behavioral interventions and different types of diets in combination with physical activity

Unraveling the Links between Nutrients and Metabolic Dysfunction-Associated Liver Disease: Insights and Implications Md Wasim Khan, Claudia Tovar-Palacio, Bruno Ramos-Molina, Ivan Torre-Villalvazo, 2024-12-06 The Research Topic Unraveling the Links between Nutrients and Metabolic Dysfunction Associated Liver Disease Insights and Implications focuses on the relationship between nutrient intake and metabolic liver diseases such as metabolic dysfunction associated fatty liver disease MAFLD and MAFLD associated hepatocarcinoma The collection will include original articles and reviews exploring the role of specific nutrients such as carbohydrates proteins and fats as well as dietary bioactive compounds in developing and progressing metabolic liver disease or improving liver deterioration Additionally the collection discusses the impact of dietary patterns and interventions such as calorie restriction and supplementation on liver health The insights gained from these articles provide valuable information on preventing and treating metabolic liver disease through dietary modification and nutritional interventions

Cardiovascular Diseases Related to Diabetes and Obesity, volume V Ying Xin, 2025-09-18 Given the success of the previous collection Cardiovascular Diseases Related to Diabetes and Obesity Volume IV and the new advances in the field we are pleased to announce the launch of Volume V The dramatic increase in the prevalence of diabetes obesity and metabolic syndrome worldwide has seriously threatened human health since its associated complications cause high morbidity and

mortality Among the complications cardiovascular diseases are the predominant component Although various controls for blood glucose and blood pressure are applied patients with diabetes or obesity and associated metabolic syndromes are still at high risk of developing various cardiovascular diseases nephropathy retinopathy neuropathy skin disorders and male infertility Therefore we need to understand the mechanisms underlying the pathogenesis of these complications in order to develop more effective therapies to prevent or slow down the progression of diabetic or metabolic syndrome complications One of the underlying mechanisms for these cardiovascular diseases is oxidative stress a critical role in the pathogenesis of diabetic complications Diabetes induced overproduction of mitochondrial superoxide leads to a series of detrimental cellular events including the increased formation of advanced glycation end products AGEs increased expression of the receptor for AGEs RAGE and activation of protein kinase C isoforms the polyol pathway and the hexosamine pathway These effects consequently result in pathological remodeling of the end organs and their dysfunction Hence targeting diabetes induced oxidative stress has attracted much research interest in recent years

Exploring the New Biomarkers and Clinical Indicators for Diabetes: Insights from Real-World Studies Weiwei Liu,Xun Lei,Reza Daryabeygi ,Enying Gong,2025-12-04

Diabetes has garnered significant attention as a global health issue especially in the modern era marked by lifestyle changes and dietary shifts which have contributed to its escalating prevalence With the advancement of big data technologies there is an opportunity to delve deeper into the relationship between diabetes and risk model predictions Human routines and dietary patterns play a pivotal role in diabetes risk and the wealth of publicly available databases provides an opportunity for in depth exploration Through this Research Topic we aspire to delve deeper into the forefront issues surrounding diabetes and novel biomarkers offering new perspectives and methodologies for more precise diabetes risk assessment and prevention We look forward to your contributions Our Research Topic aims to gather the latest research on clinical indicators and novel biomarkers regarding diabetes prevention We invite contributions from researchers who can share their findings innovative methods and insights into utilizing big data for improved diabetes risk prediction Studies can incorporate various designs including large scale survey designed as cross sectional case control and cohort studies We strongly encourage the use of advanced causal inference methods such as difference in differences models instrumental variables propensity score matching and inverse probability weighting within the framework of causal inference Original research covering the identification of novel biomarkers and clinical indicators for diabetes or related endocrine diseases are welcome Potential sub topics include but are not limited to Newly identified novel biomarkers or clinical indicators for diabetes along with endocrine diseases Causality inference of risk factors for diabetes related diseases Novel manners to enhance the generality of research using public databases

Assessment of Nutritional Status in Chronic Diseases

Olivia Di Vincenzo ,Mariacristina Siotto,2025-09-22 Malnutrition undernutrition is defined as a state consequent to a lack of intake or uptake of nutrition that leads to altered body composition reduced physical and cognitive function and impaired

clinical outcome from disease A poor nutritional status is common in patients affected by chronic diseases and may negatively affect diagnosis prognosis and the clinical course of disease Thus the assessment of nutritional status plays a crucial role in the management of chronic diseases It involves a multidimensional approach including different factors such as dietary intake anthropometric measurements biochemical markers and clinical evaluation Anthropometric measurements and body composition offer valuable insights into the assessment of nutritional status and risk of complications In addition biochemical markers provide objective data on nutritional deficiencies and metabolic abnormalities Factors such as inflammation and comorbidities can influence nutritional biomarkers necessitating careful interpretation

Value-Based Nutritional Intervention to Reduce the Progression of Chronic Human Diseases Mohammed S. Razzaque, Azeddine Atfi, 2023-12-08 Nutritional imbalances including various vitamins and minerals magnesium zinc calcium iodine selenium iron and phosphate are associated with the initiation and propagation of various chronic diseases including metabolic and systemic diseases Increased accessibility of value based nutritious foods with professional help to raise the awareness of the long term benefits of healthy eating habits can delay the evolvement and progression of chronic human diseases The value based nutritional intervention can improve general health outcomes for patients with chronic diseases and reduce overall care costs

Behavioural and Ecological Consequences of Urban Life in Birds Caroline Isaksson, Amanda D. Rodewald, Diego Gil, 2018-06-19 Urbanization is next to global warming the largest threat to biodiversity Indeed it is becoming increasingly evident that many bird species get locally extinct as a result of urban development However many bird species benefit from urbanization especially through the abundance of human provided resources and increase in abundance and densities These birds are intriguing to study in relation to its resilience and adaption to urban environments but also in relation to its susceptibility and the potential costs of urban life This Research Topic consisting of 30 articles one review two meta analyzes and 27 original data papers provides insights into species and population responses to urbanization through diverse lenses including biogeography community ecology behaviour life history evolution and physiology

Free Radicals in Food Michael J. Morello, Fereidoon Shahidi, Chi-Tang Ho, 2002 Annotation Free Radicals in Food Chemistry Nutrition and Health presents recent developments in free radical chemistry as it pertains to food systems antioxidants and nutritional biochemistry and health This book intends to illustrate the potential chemical links between food and health The book is organized into three main sections Food Chemistry Antioxidants and Nutritional Biochemistry and Health Chapters in the Food Chemistry section cover free radical participation in Maillard reactions emulsions and lysozymes milk meat and extruded grains This section also addresses detection of radicals by ESR and spin trapping techniques Chapters in the Antioxidant section cover phenolic and polyphenols from seeds and tea tannins and isoflavonoids Chapters in the Nutritional Biochemistry and Health section cover the influence of food antioxidants and radical damaged ingredients on oxidases colon carcinogenesis atherosclerosis and liver epithelial RL34 cells The ability of specific food components and supplements to

intervene in free radical reactions is believed to play a significant role in their ability to promote health and ameliorate disease Free Radicals in Food presents specific chemical evidence to support these hypotheses **Wine** Tom R. Watkins,1997 Taking a scientific look at a popular and controversial topic this book examines both the composition of wine and its possible health benefits particularly its potential for preventing cancer and cardiovascular disease The book discusses antioxidants in wine and looks at the environmental influences on antioxidant content It also covers problems associated with measuring phenolics stilbenes and other reducing substances in wine and reviews the impact of ecology and agronomic practice on crop yield and quality **Progressive Medicine** Hobart Amory Hare,1917 A quarterly digest of advances discoveries and improvements in the medical and surgical sciences **Progressive Medicine** ,1916 The Journal of Experimental Zoology Ross Granville Harrison,William Keith Brooks,1907 A separate section of the journal Molecular and developmental evolution is devoted to experimental approaches to evolution and development **Journal of the American Medical Association** American Medical Association,1926 *Normal Backwardness and Balance in Child Life* George Dow Scott,1926 **Chemical News and Journal of Physical Science** ,1911 *The Chemical News and Journal of Industrial Science* William Crookes,James H.
