

Solid-State Laser

- Solid-state lasers utilize solid crystals as the lasing medium, influencing many technological areas from manufacturing to scientific research
- Central to their operation is the excitation of atoms in crystals like ruby or Nd:YAG, emitting laser light as they return to their ground state
- These lasers are known for high output power, efficiency, and compactness, but face challenges like heat management and cost
- They're fundamental in material processing, medical procedures, scientific research, and telecommunications

Tunable Solid State Lasers for Remote Sensing Robert L. Byer, Eric K. Gustafson, Rick Trebino, 2013-06-29 The Workshop on Tunable Solid State Lasers for Remote Sensing was held at Stanford University in October 1984 to assess the state of the art in tunable solid state lasers for remote sensing from satellite platforms The value of conducting global remote sensing measurements of atmospheric chemistry climate and weather in the 1990s is now established What is not yet defined however is the status of the developing tunable laser technology that must meet both the scientific requirements and the space platform constraints This workshop was convened by the Office of Aeronautics and Space Technology OAST of the National Aeronautics and Space Administration NASA to assess the status and progress in tunable solid state laser sources for remote sensing The workshop was organized to facilitate information exchange across a number of technologies from remote sensing requirements to crystal growth of the materials important for the development of the tunable laser sources The emphasis was on the recent developments in tunable solid state laser sources necessary to meet the future transmitter requirements for global remote sensing A goal of the workshop was to form recommendations to NASA on the current and future prospects for solid state laser technology that will allow remote sensing measurements from air shuttle and free flying satellite platforms The emphasis was on solid state laser sources because they offer the best potential for meeting the demanding requirements of compact size good efficiency and long operational lifetimes required for future space station and free flying platform operation
