Urban River:

Managing Urban Rivers Victor R. Shinde, Rajiv Ranjan Mishra, Uday Bhonde, Hitesh Vaidya, 2023-09-23 *Managing Urban Rivers From Planning to Practice* captures the different facets of river management required for integrating rivers within the development landscape of cities in a sustainable manner. Sections cover the entire spectrum of urban river management from planning to actual on the ground implementation providing a one stop destination for knowledge on urban river management. Edited by a team of four experts with practical experience in this domain the different chapters of the book are authored by eminent scholars and practitioners with expertise in specific areas of urban river management. Urban rivers and their management is a hot topic as governments across the world are focusing on this aspect especially since it has direct implications for SDG target 6.6 which aims to protect and restore water related ecosystems including mountains forests wetlands rivers aquifers and lakes. Presents practical global case studies in almost every chapter. Provides recommendations for best practices based on lessons from different successful case studies as well as the expert insights of the authors. Features contributions from global experts for a unique and specialized approach to the topic of urban rivers. [Managing Urban River Ecosystems for Achieving Regional Sustainability in the Pearl River Delta Region](#) Hui Liu, 2024-12-13 This book provides a systematic understanding of urban river management from the perspective of ecosystem health in the Pearl River Delta region of China where rapid socio economic development happens together with exploitation and pollution of the natural environment. Urban rivers which used to support navigation and provide water resources to humans now suffer from various kinds of ecosystem degradation and thus create threats to regional sustainability. This book treats the urban river as an ecosystem which closely relates to and interacts with humans and defines urban river ecosystem health as a requirement at three levels: sensorial fitness, living water and affinity with humans which emphasizes more on the human oriented needs. The evolution processes of urban river ecosystem health protection can generally be divided into four phases demonstrating the relationships between human activities and UREH status as simple balance, uncontrolled imbalance, continuous interlocking and stable harmony. The relationships between typical urban rivers and humans in the Pearl River Delta region, China are then analyzed on both regional and local scales and from lateral time, longitudinal and spatial dimensions. Intensive human activities together with the intrinsic complex and high density river network result in deteriorating water quality, changing hydrological conditions and damaging the river ecosystem in this region. From the perspective of political ecology, various actors in urban river management include governmental agencies, business, multilateral institutions, ENGOs and grassroots actors whose unequal power relations vary over time and space causing conflicts as well as coordination. Especially different governmental agencies are engaged resulting into overlap and gap among their functions as well as spatial discrepancy. River Chief System as a new practice of urban river management has strengthened the collaboration effect and got success in river pollution control. The spatial scale effect of human activities on urban river water quality is

examined implying the necessity of adopting a unified management strategy at the buffer zone scale to protect and restore urban river ecosystem health The target audience of this book includes postgraduate students and researchers who have research interests in as well as government officers whose routine is related to water management **Rivertown** Paul Stanton Kibel,2007 Each case study in Rivertown considers the critical questions of who makes decisions about our urban rivers who pays to implement these decisions and who ultimately benefits or suffers from these decisions book cover

Urban Rivers Stephane Castonguay,Matthew Evenden,2012-05-10 *Urban Rivers* examines urban interventions on rivers through politics economics sanitation systems technology and societies how rivers affected urbanization spatially in infrastructure territorial disputes and in flood plains and via their changing ecologies Providing case studies from Vienna to Manitoba the chapters assemble geographers and historians in a comparative survey of how cities and rivers interact from the seventeenth century to the present Rising cities and industries were great agents of social and ecological changes particularly during the nineteenth century when mass populations and their effluents were introduced to river environments Accumulated pollution and disease mandated the transfer of wastes away from population centers In many cases potable water for cities now had to be drawn from distant sites These developments required significant infrastructural improvements creating social conflicts over land jurisdiction and affecting the lives and livelihood of nonurban populations The effective reach of cities extended and urban space was remade By the mid twentieth century new technologies and specialists emerged to combat the effects of industrialization Gradually the health of urban rivers improved From protoindustrial fisheries mills and transportation networks through industrial hydroelectric plants and sewage systems to postindustrial reclamation and recreational use *Urban Rivers* documents how Western societies dealt with the needs of mass populations while maintaining the viability of their natural resources The lessons drawn from this study will be particularly relevant to today s emerging urban economies situated along rivers and waterways **Urban Rivers** G. Petts,J. Heathcote,D. Martin,2002-03-31 The history of urban development is associated with the degradation of rivers the deterioration of water quality increased flooding and the loss of ecological resources The story of urban streams and rivers is as much a social history as it is a technological one The control of nature and exploitation of natural resources was at the heart of the industrialisation process and of advances in the co ordination and effective administration of water and land management schemes Today new approaches to the management of urban water are a response to advances in scientific knowledge and technology and of a new concern for quality of life Environmental improvement and ecological restoration demonstrate confidence in an area which can enhance economic competitiveness Along with improvements in air quality building stock and transport networks the restoration of stream and river corridors can make a major contribution to the success of urban regeneration schemes *Urban Rivers* provides an illustrated overview of the effects of urbanisation on the aquatic environment potential solutions to the resulting problems and new opportunities for the regeneration of urban

streams and rivers and of land along their corridors and of adjacent urban areas The book is written to be accessible to a broad audience and should provide a stimulating and informative introduction to the subject for all those concerned with the urban river environment

Rivers Lost, Rivers Regained Martin Knoll,Uwe Lubken,Dieter Schott,2017-06-13 Many cities across the globe are rediscovering their rivers After decades or even centuries of environmental decline and cultural neglect waterfronts have been vamped up and become focal points of urban life again hidden and covered streams have been daylighted while restoration projects have returned urban rivers in many places to a supposedly more natural state This volume traces the complex and winding history of how cities have appropriated lost and regained their rivers But rather than telling a linear story of progress the chapters of this book highlight the ambivalence of these developments The four sections in Rivers Lost Rivers Regained discuss how cities have gained control and exerted power over rivers and waterways far upstream and downstream how rivers and floodplains in cityscapes have been transformed by urbanization and industrialization how urban rivers have been represented in cultural manifestations such as novels and songs and how more recent strategies work to redefine and recreate the place of the river within the urban setting At the nexus between environmental urban and water histories Rivers Lost Rivers Regained points out how the urban river relationship can serve as a prime vantage point to analyze fundamental issues of modern environmental attitudes and practices
