The *Linji lu* (Record of Linji) has been an essential text of Chinese and Japanese Zen Buddhism for nearly a thousand years. A compilation of sermons, statements, and acts attributed to the great Chinese Zen master Linji Yixuan (d. 866), it serves as both an authoritative statement of Zen's basic standpoint and a central source of material for Zen koan practice. One of the earliest attempts to translate this important work into English was by Sasaki Shigetsu (1882-1945), a pioneer Zen master in the U.S. and the founder of the First Zen Institute of America. At the time of his death, he entrusted the project to his wife, Ruth Fuller Sasaki. Determined to produce a definitive translation, Mrs. Sasaki assembled a team of talented young scholars, both Japanese and Western, who in the following years retranslated the text in accordance with modern research on Tang-dynasty colloquial Chinese. The materials assembled by Mrs. Sasaki and her team are finally available in the present edition of the *Record of Linji*. The notes, nearly six hundred in all, are almost entirely based on primary sources and thus retain their value despite the nearly forty years since their preparation. *National Union Catalog*, 1980. Includes entries for maps and atlases. **Responses and Adaptations to Novel Exercise Modalities** Kevin D. Ballard, Kyle Timmerman, Jessica Bourne, 2026-02-02. In the realm of physical fitness, traditional exercise modalities have evolved to include not only standard practices but also diverse approaches like yoga, High Intensity Interval Training (HIIT), and electric biking (e-biking). While these modalities vary significantly, they share the common goal of enhancing accessibility and improving the physical health and well-being of individuals. The emerging interest in these unconventional exercises highlights a growing need to understand the physiological responses and adaptations elicited by these unconventional exercises to optimize training protocols, enhance performance, and promote overall health. A growing body of recent studies highlights the distinct physiological mechanisms activated by these exercise modalities, showing diverse effects on cardiovascular health, metabolic rates, exercise adherence, and overall physical health and performance. These findings suggest that understanding these unique responses is critical for developing enhanced training protocols that support health improvements and disease prevention. The broad

implications of these results necessitate further exploration to better integrate unconventional exercises into broader health and wellness strategies This Research Topic aims to explore the complex interactions between unconventional exercise modalities and human physiology further To deepen our understanding in this field we are calling for original research articles review papers and case reports that investigate Cardiovascular adaptations Metabolic responses Muscular adaptations Respiratory changes Neurological adaptations Endocrine responses Immune system effects Thermoregulatory responses By collating a diverse array of studies from controlled lab experiments to longitudinal field studies this collection seeks to forge new pathways in the application of these insights to promote holistic health oriented exercise regimes
