Soft Computing and Intelligent Systems Design Fakhreddine O. Karray,Clarence W. De Silva,2004 Traditional artificial intelligence AI techniques are based around mathematical techniques of symbolic logic with programming in languages such as Prolog and LISP invented in the 1960s

These are referred to as crisp techniques by the soft computing community. The new wave of AI methods seeks inspiration from the world of biology and is being used to create numerous real world intelligent systems with the aid of soft computing tools. These new methods are being increasingly taught at the upper end of the curriculum sometimes as an adjunct to traditional AI courses and sometimes as a replacement for them. Where a more radical approach is taken and the course is being taught at an introductory level we have recently published Negnevitsky's book. Karray and Silva will be suitable for the majority of courses which will be found at an advanced level. Karray and de Silva cover the problem of control and intelligent systems design using soft computing techniques in an integrated manner. They present both theory and applications including industrial applications and the book contains numerous worked examples, problems and case studies. Covering the state of the art in soft computing techniques, the book gives the reader sufficient knowledge to tackle a wide range of complex systems for which traditional techniques are inadequate. *Encyclopedia of Artificial Intelligence* Rabuñal Dopico, Juan

Ramón, Dorado, Julian, Pazos, Alejandro, 2008-07-31. This book is a comprehensive and in depth reference to the most recent developments in the field covering theoretical developments, techniques, technologies among others. Provided by publisher

Hybrid Intelligent Systems for Pattern Recognition Using Soft Computing Patricia Melin, Oscar Castillo, 2005-03-08. This monograph describes new methods for intelligent pattern recognition using soft computing techniques including neural networks, fuzzy logic and genetic algorithms. Hybrid intelligent systems that combine several soft computing techniques are needed due to the complexity of pattern recognition problems. Hybrid intelligent systems can have different architectures which have an impact on the efficiency and accuracy of pattern recognition systems to achieve the ultimate goal of pattern recognition. This book also shows results of the application of hybrid intelligent systems to real world problems of face, fingerprint and voice recognition. This monograph is intended to be a major reference for scientists and engineers applying new computational and mathematical tools to intelligent pattern recognition and can be also used as a textbook for graduate courses in soft computing, intelligent pattern recognition, computer vision or applied artificial intelligence. **Neural Fuzzy Systems** Ching Tai Lin, C. S. George Lee, 1996. Neural Fuzzy Systems provides a comprehensive up to date introduction to the basic theories of fuzzy systems and neural networks as well as an exploration of how these two fields can be integrated to create Neural Fuzzy Systems. It includes Matlab software with a Neural Network Toolkit and a Fuzzy System Toolkit.

Designing Effective Evolutionary Computations Kumar Hemachandra Chellapilla, 2005. Soft Computing for Hybrid Intelligent Systems Oscar Castillo, Patricia Melin, Witold Pedrycz, 2008-08-25. We describe in this book new methods and applications of hybrid intelligent systems using soft computing techniques. Soft Computing (SC) consists of several intelligent computing paradigms including fuzzy logic, neural networks and evolutionary algorithms which can be used to produce powerful hybrid intelligent systems. The book is organized in five main parts which contain a group of papers around a similar subject. The first part consists of papers with the main theme of intelligent control which are basically papers that

use hybrid systems to solve particular problems of control The second part contains papers with the main theme of pattern recognition which are basically papers using soft computing techniques for achieving pattern recognition in different applications The third part contains papers with the themes of intelligent agents and social systems which are papers that apply the ideas of agents and social behavior to solve real world problems The fourth part contains papers that deal with the hardware implementation of intelligent systems for solving particular problems The fifth part contains papers that deal with modeling simulation and optimization for real world applications
