SPSS for Windows, Advanced Statistics, Release 6.0 Marija J. Norušis, 1993 **Perceptual Audio Evaluation - Theory, Method and Application** Søren Bech, Nick Zacharov, 2007-01-11

As audio and telecommunication technologies develop there is an increasing need to evaluate the technical and perceptual performance of these innovations. A growing number of new technologies e.g. low bit rate coding are based on specific properties of the auditory system which are often highly non linear. This means that the auditory quality of such systems cannot be measured by traditional physical measures such as distortion frequency response etc but only by perceptual evaluations in the form of listening tests. Perceptual Audio Evaluation provides a comprehensive guide to the many variables that need to be considered before during and after experiments. Including the selection of the content of the programme material to be reproduced technical aspects of the production of the programme material the experimental set up including calibration and the statistical planning of the experiment and subsequent analysis of the data. Perceptual Audio Evaluation Provides a complete and accessible guide to the motives theory and practical application of perceptual evaluation of reproduced sound. Discusses all the variables of perceptual evaluation their control and their possible influence on the results. Covers in detail all international standards on the topic. Is illustrated throughout with tables figures and worked solutions. Perceptual Audio Evaluation will appeal to audio and speech engineers as well as researchers in audio and speech laboratories. Postgraduate students in engineering or acoustics and undergraduate students studying psychoacoustics speech audio processing and signal processing will also find this an essential reference.

Subject Guide to Books in Print, 1993 **SPSS/PC+ 4.0 Base Manual for the IBM PC/XT/AT and PS/2** Marija J. Norušis, SPSS Inc, 1990 Intermediate Statistics James P. Stevens, 2013-05-13

James Stevens best selling text Intermediate Statistics is written for those who use rather than develop statistical techniques. Dr Stevens focuses on a conceptual understanding of the material rather than on proving the results. SAS and SPSS are an integral part of each chapter. Definitional formulas are used on small data sets to provide conceptual insight into what is being measured. The assumptions underlying each analysis are emphasized and the reader is shown how to test the critical assumptions using SPSS or SAS. Printouts with annotations from SAS or SPSS show how to process the data for each analysis. The annotations highlight what the numbers mean and how to interpret the results. Numerical conceptual and computer exercises enhance understanding. Answers are provided for half of the exercises. The book offers comprehensive coverage of one way power and factorial analysis of variance repeated measures analysis simple and multiple regression analysis of covariance and HLM. Power analysis is an integral part of the book. A computer example of real data integrates many of the concepts. Highlights of the Third Edition include A new chapter on hierarchical linear modeling using HLM6. Downloadable resources containing all of the book's data sets. New coverage of how to cross validate multiple regression results with SPSS and a new section on model selection. Chapter 6. More exercises in each chapter.
