

What is **Solidification**?

Solidification is the process by which a substance changes from a liquid or gas state to a solid state as it loses heat.

During this phase transition, particles lose kinetic energy, arranging themselves into a more ordered and rigid structure.

Commonly observed in freezing or crystallization, solidification plays a fundamental role in material science, manufacturing, and geophysics.

Understanding the **solidification** process is crucial for controlling the properties of materials, from metals to polymers, and for studying natural phenomena like the formation of ice in freezing water.

Aluminium Alloys Subbarayan Sivasankaran,2017-12-21 The major issue of energy saving and conservation of the environment in the world is being emphasized to us to concentrate on lightweight materials in which aluminium alloys are contributing more in applications in the twenty first century Aluminium and its related materials possess lighter weight considerable strength more corrosion resistance and ductility Especially from the past one decade the use of aluminium alloys is increasing in construction field transportation industries packaging purposes automotive defence aircraft and electrical sectors Around 85% is being used in the form of wrought products which replace the use of cast iron Further the major features of aluminium alloy are recyclability and its abundant availability in the world In general aluminium and its related materials are being processed via casting drawing forging rolling extrusion welding powder metallurgy process etc To improve the physical and mechanical properties scientists are doing more research and adding some second phase particles in to it called composites in addition to heat treatment Therefore to explore more in this field the present book has been aimed and focused to bridge all scientists who are working in this field The main objective of the present book is to

focus on aluminium its alloys and its composites which include but are not limited to the various processing routes and characterization techniques in both macro and nano levels
