Pseudocode looks a lot like actual Pascal code, but there is a difference. While writing pseudocode, the intricacies of the program itself are ignored and only the general outline of the algorithm is presented. The reason pseudocode is kept general is threefold. First, the purpose of pseudocode is to provide a logical framework from which to write the Pascal code. If the pseudocode is too specific, it constrains the programmer while implementing the algorithm in a computer language. Furthermore, if the pseudocode is too complex, it is difficult to understand and takes a long time to write. Most important, if part of the final program does not work, you can check the pseudocode and determine which part should do what. If the pseudocode is too specific, then you may need to rewrite the entire algorithm for just one change.

The ultimate goal of structure diagrams and pseudocode is to provide an organizational framework for the implementation of the final program. Many programmers consider themselves productive only when they are writing code. They spend very little time preparing to write a program, but end up spending hours searching for and correcting errors resulting from poor design. Time spent outlining an algorithm can greatly reduce the time later spent repairing holes in the logic.

1.3 Testing the Algorithm

It seems strange that a program, even before it has been typed into the computer, should be tested for errors. However, most major errors occur during the algorithm development process. The algorithm must
