Starting Points Winter:

Russian verbal prefixation Yulia Zinova, 2021 This book addresses the complexity of Russian verbal prefixation system that has been extensively studied but yet not explained Traditionally different meanings have been investigated and listed in the dictionaries and grammars and more recently linguists attempted to unify various prefix usages under more general descriptions The existent semantic approaches however do not aim to use semantic representations in order to account for the problems of prefix stacking and aspect determination This task has been so far undertaken by syntactic approaches to prefixation that divide verbal prefixes in classes and limit complex verb formation by restricting structural positions available for the members of each class I show that these approaches have two major drawbacks the implicit prediction of the non existence of complex biaspectual verbs and the absence of uniformly accepted formal criteria for the underlying prefix classification In this book the reader can find an implementable formal semantic approach to prefixation that covers five prefixes za na po pere and do It is shown how to predict the existence semantics and aspect of a given complex verb with the help of the combination of an LTAG and frame semantics The task of identifying the possible affix combinations is distributed between three modules syntax which is kept simple only basic structural assumptions frame semantics which ensures that the constraints are respected and pragmatics which rules out some prefixed verbs and restricts the range of available interpretations For the purpose of the evaluation of the theory an implementation of the proposed analysis for a grammar fragment using a metagrammar description is provided It is shown that the proposed analysis delivers more accurate and complete predictions with respect to the existence of complex verbs than the most precise syntactic account

Resolving the Controversies in Astrology and Vedic Astronomy Dr Sriharsha Indrasena FRCS,2020-07-21 The controversies between astrology and Vedic astronomy arise historically due to a mixture of astronomical miscalculations differing calendrical systems and philosophical interpretations Classical Vedic texts often describe celestial motions planetary periods and auspicious timings muhurta that can appear inconsistent with modern tropical astronomy Key points of debate include

- 1 Tropical vs Sidereal Zodiac Astrology in the Western tradition typically uses the tropical zodiac tied to the seasonal equinoxes Vedic Jyotish astrology uses the sidereal zodiac which references fixed stars The difference approximately 24 currently is called ayanamsha Controversies arise over which ayanamsha system most accurately models celestial positions
- 2 Rahu Ketu and Planetary Nodes Vedic texts assign significant predictive power to lunar nodes Rahu ascending and Ketu descending Controversy stems from reconciling mythological descriptions with modern orbital mechanics Vedic astronomy treats them as calculable points rather than planets
- 3 Calendrical Systems and Yuga Cycles References to Chaturyuga Mahayuga Saptarshis calendar Salivahana Saka Vikram Samvat and Kali Yuga yield disputes about historical chronology Differences in intercalary extra months or lost months have caused inconsistencies in dating historical events
- 4 Graha Yuddha and Charakaraka Planetary conjunctions graha yuddha documented in Vedic texts often conflict with modern ephemerides Charakaraka planets specific key planets for a person can differ from current positional astronomy causing discrepancies in predictive astrology
- 5 Historical Figures and Chronology Dating figures like Varahamihira Aryabhata Kalidasa and King Vikramaditya is complicated by differing Vedic era calendars versus modern astronomical calculations

Approach to Resolution Dr Sriharsha Indrasena in his book Resolving the Controversies in Astrology and Vedic Astronomy proposes an integrative and analytical approach

- a Empirical Correlation Compare historical astronomical events eclipses planetary positions recorded in Vedic texts with modern calculations to validate reliability
- b Philosophical Reconciliation Recognize that astrology is partially symbolic some controversies stem from literal interpretations of mythological concepts
- c Standardizing Ayanamsha Employ a scientifically consistent ayanamsha value agreed upon through astronomical modeling to reconcile tropical and sidereal differences
- d Critical Historical Analysis Crosscheck ancient texts with archaeological and epigraphic evidence to resolve chronological disputes
- e g dating Mahayuga cycles or Saptarshis movements
- e Integration with Modern Science Translate Vedic descriptions of celestial mechanics into terms compatible with heliocentric orbital data without undermining the symbolic or ritualistic significance

Conclusion Resolving controversies in astrology and Vedic

astronomy requires a multidisciplinary approach i Combine astronomy archaeology textual criticism and philosophy ii Treat astrological constructs symbolically while validating astronomical claims empirically iii Harmonize calendars yugas and zodiac frameworks with robust astronomical models The work of Dr Indrasena provides substantial references and methodologies to bridge traditional Vedic systems with modern astronomical understanding helping scholars astrologers and enthusiasts to critically examine and reconcile disagreements
