## **Toward Composition:**

Toward a Composition Made Whole Jody L. Shipka, 2011-04-30 To many academics composition still represents typewritten texts on 8.5 x 11 pages that follow rote argumentative guidelines In *Toward a Composition Made Whole* Jody Shipka views composition as an act of communication that can be expressed through any number of media and as a path to meaning making Her study offers an in depth examination of multimodality via the processes values structures and semiotic practices people employ every day to compose and communicate their thoughts Shipka counters current associations that equate multimodality only with computer digitized or screen mediated texts which are often self limiting She stretches the boundaries of composition to include a hybridization of aural visual and written forms Shipka analyzes the work of current scholars in multimodality and combines this with recent writing theory to create her own teaching framework Among her methods Shipka employs process oriented reflection and a statement of goals and choices to prepare students to compose using various media in ways that spur their rhetorical and material awareness They are encouraged to produce unusual text forms while also learning to understand the composition process as a whole Shipka presents several case studies of students working in multimodal composition and explains the strategies tools and spaces they employ She then offers methods to critically assess multimodal writing projects *Toward a Composition Made Whole* challenges theorists and compositionists to further investigate communication practices and broaden the scope of writing to include all composing methods While Shipka views writing as crucial to discourse she challenges us to always consider the various purposes that writing serves

*Postcomposition* Sidney I Dobrin, 2011-06-02 Leading a burgeoning self critical moment in composition studies and writing program administration *Postcomposition* is a fundamental reconsideration of the field that attempts to shift the focus away from pedagogy and writing subjects and toward writing itself In this forceful and reasoned critique of many of the primary tenets and widely accepted institutional structures of composition studies Sidney I Dobrin delivers a series of shocks to the system meant to disrupt the pedagogical imperative and move beyond the existing limits of the discipline Dobrin evaluates the current state of composition studies underscoring the difference between composition and writing and arguing that the field's focus on the administration of writing students and its historically imposed prohibition on theory greatly limit what can be understood about writing Instead he envisions a more significant approach to writing one that questions the field's conservative allegiance to subject and administration and reconsiders writing as spatial and ecological Using concepts from ecocomposition spatial theory network theory complexity theory and systems theory *Postcomposition* lays the groundwork for a networked theory of writing and advocates the abandonment of administration as a useful part of the field He also challenges the usefulness of rhetoric in writing studies showing how writing exceeds rhetoric *Postcomposition* is a detailed consideration of how posthumanism affects the field's understanding of subjectivity It also tears at the seams of the contingent labor problem As he articulates his own frustrations with the conservatism of composition studies and builds on

previous critiques of the discipline Dobrin stages a courageous and inevitably polemical intellectual challenge to the entrenched ideas and assumptions that have defined composition studies

Introduction to Scholarship in Modern Languages and Literatures David G. Nicholls, 2015-01-01 The third edition of the MLA's widely used Introduction to Scholarship in Modern Languages and Literatures features sixteen new essays by leading scholars Designed to highlight relations among languages and forms of discourse the volume is organized into three sections Understanding Language provides an overview of the field of linguistics with special attention to language acquisition and the social life of languages Forming Texts offers tools for understanding how speakers and writers shape language it examines scholarship in the distinct but interrelated fields of rhetoric composition and poetics Reading Literature and Culture continues the work of the first two sections by introducing major areas of critical study The nine essays in this section cover textual and historical scholarship interpretation comparative cultural and translation studies and the interdisciplinary topics of gender sexuality race and migrations among others As in previous volumes an epilogue examines the role of the scholar in contemporary society Each essay discusses the significance underlying assumptions and limits of an important field of inquiry traces the historical development of its subject introduces key terms outlines modes of research now being pursued postulates future developments and provides a list of suggestions for further reading This book will interest any member of the academic community seeking a review of recent scholarship while it provides an indispensable resource for undergraduate and graduate students of modern languages and literatures

*Modern JavaScript with AI* Ling Tianhao, JavaScript has never been easier to write and never easier to misunderstand Modern development environments now provide constant assistance code suggestions refactors explanations and entire functions generated on demand While this accelerates development it also introduces a quiet risk Code can be produced faster than it is understood and systems can grow beyond the developer's ability to reason about them Modern JavaScript with AI is written for developers who want to move faster without surrendering understanding judgment or responsibility This book approaches JavaScript as a system to be reasoned about not a set of shortcuts to apply It focuses on how JavaScript actually behaves how code executes how data flows how systems evolve and how developers remain accountable in an AI-assisted workflow Rather than replacing fundamentals with automation this book shows how to integrate AI after understanding not before it

**What This Book Covers** This book provides a deep practical understanding of modern JavaScript including How JavaScript source code is parsed executed and scheduled The call stack event loop and asynchronous execution explained clearly Variables scope data mutation and reference behavior Control flow and decision making that scales with complexity Functions as units of responsibility and design Object identity composition and long-lived models The Document Object Model as a dynamic system Events state and user interaction under real-world conditions Asynchronous programming promises and concurrency challenges Working safely with APIs and external data Testing tooling and long-term maintainability Professional responsibility in AI-assisted

development Each chapter includes realistic case studies carefully chosen examples explanatory diagrams and notes that address issues commonly encountered in production systems Who This Book Is For This book is written for Developers who want to understand JavaScript deeply Professionals working in AI assisted development environments Self taught developers seeking structure and clarity Front end and full stack developers maintaining real systems Engineers who value correctness clarity and long term maintainability It is suitable for motivated beginners and especially valuable for developers who already use JavaScript and want to strengthen their reasoning and decision making skills How This Book Treats AI AI is treated as a supporting tool not a source of authority You will learn how to Use AI to review assumptions and explore alternatives Detect oversimplification and plausible but wrong suggestions Maintain authorship and accountability over your code Decide when AI assistance helps and when it should be avoided The focus throughout the book is clear ownership AI may assist but responsibility remains with the developer
