The Making of International Educators, Part I & II Gary Downey, Kacey Beddoes, 2022-05-31 Global engineering offers the seductive image of engineers figuring out how to optimize work through collaboration and mobility Its biggest challenge to engineers however is more fundamental and difficult to better understand what they know and value qua engineers and why This volume reports an experimental effort to help sixteen engineering educators produce personal geographies describing what led them to make risky career commitments to international and

global engineering education The contents of their diverse trajectories stand out in extending far beyond the narrower image of producing globally competent engineers Their personal geographies repeatedly highlight experiences of incongruence beyond home countries that provoked them to see themselves and understand their knowledge differently The experiences were sufficiently profound to motivate them to design educational experiences that could challenge engineering students in similar ways For nine engineers gaining new international knowledge challenged assumptions that engineering work and life are limited to purely technical practices compelling explicit attention to broader value commitments For five non engineers and two hybrids gaining new international knowledge fueled ambitions to help engineering students better recognize and critically examine the broader value commitments in their work A background chapter examines the historical emergence of international engineering education in the United States and an epilogue explores what it might take to integrate practices of critical self analysis more systematically in the education and training of engineers Two appendices and two online supplements describe the unique research process that generated these personal geographies especially the workshop at the U S National Academy of Engineering in which authors were prohibited from participating in discussions of their manuscripts Table of Contents The Border Crossers Personal Geographies of International and Global Engineering Educators Gary Lee Downey From Diplomacy and Development to Competitiveness and Globalization Historical Perspectives on the Internationalization of Engineering Education Brent Jesiek and Kacey Beddoes Crossing Borders My Journey at WPI Rick Vaz Education of Global Engineers and Global Citizens E Dan Hirleman In Search of Something More My Path Towards International Service Learning in Engineering Education Margaret F Pinnell International Engineering Education The Transition from Engineering Faculty Member to True Believer D Joseph Mook Finding and Educating Self and Others Across Multiple Domains Crossing Cultures Disciplines Research Modalities and Scales Anu Ramaswami If You Don t Go You Don t Know Linda D Phillips A Lifetime of Touches of an Elusive Virtual Elephant Global Engineering Education Lester A Gerhardt Developing Global Awareness in a College of Engineering Alan Parkinson The Right Thing to Do Graduate Education and Research in a Global and Human Context James R Mihelcic Author Biographies [The Contribution of Universities Towards Education for Sustainable Development](#) Walter Leal Filho, Thais Dibbern, Salvador Ruiz de Maya, María-del-Carmen Alarcón-del-Amo, Longinos Marin Rives, 2024-04-01 The book gathers inputs from universities and research organizations working on matters related to sustainable development in a variety of contexts It also provides a platform for the dissemination of information on the latest initiatives paving the way for technology transfer and networking Furthermore the book intends to provide a fertile basis upon which universities may cooperate more closely in this key area Universities as centers of education research and innovation have a unique position and responsibility in promoting sustainability They can offer degree programs courses and workshops focused on sustainability environmental studies and related fields educating students and the wider community about the principles and challenges of sustainability Also universities can conduct cutting

edge research to address sustainability challenges such as climate change resource depletion and biodiversity loss They can develop innovative technologies and solutions that promote sustainable practices in various sectors including energy agriculture transportation and urban planning There is a perceived need to better understand and engage universities further on sustainability initiatives Against this backdrop and in order to facilitate a broad discussion on the contribution of universities toward sustainability this book is being produced Last but not least a further aim of the book is to present methodological approaches and experiences deriving from case studies and projects which aim to show how sustainability may be incorporated as part of university programs
