Trauma Informatics:

Trauma Informatics Kimball I. Maull, Jeffrey S. Augenstein, 2012-12-06 Information and the technology to rapidly transmit analyze document and disperse this information are increasing arithmetically if not logarithmically. Arguably no discipline better exemplifies this trend than medicine. It can be further argued that care of the trauma patient is one of the better examples of informatics and the potential benefit to the health professionals who care for these patients. Maull and Augenstein have provided us with a primer on informatics and its use in trauma care. The subject matter is timely and covers the gamut of trauma care from prehospital to rehabilitation. Who will benefit from trauma informatics? A simple answer would be anyone who takes care of trauma patients. From a broader perspective however at least three examples illustrate how trauma informatics can be used today to exert a positive effect on patient outcome. The first example is care of combat casualties including battlefield resuscitation, evacuation, acute care and ultimate return to the continental United States. Current technology is such that via global positioning satellite a corpsman could transmit to a remote area the vital signs and pertinent physical findings of a combat casualty. Furthermore the location of the corpsman and the casualty would be precisely known and consultation and destination disposition would be possible. The injured person when admitted to a combat support hospital could be continuously monitored and additional remote consultation obtained. **Telemedicine**

The book explains how telemedicine and related technologies can be used to effectively handle a wide range of scenarios from a situation as small as a car crash to major disasters such as an earthquake. Professionals find critical discussions on the practicality, logistics and safety of telemedicine from recognized experts in the field. From teleteaching and telemonitoring to teletrauma and telesurgery this authoritative book covers all the major aspects that practitioners need to understand in order to engage and utilize this burgeoning area of medicine.

Information Technology Solutions for Healthcare Krzysztof Zielinski, Mariusz Duplaga, David Ingram, 2007-10-29 Many of the changes occurring within medicine are being catalyzed by the proliferation of professional and social activity with the internet and mobile technology. Understanding how healthcare is being transformed by IT is key to improving medical standards and reducing cost. The synergy between computer technology and medical services has brought with it the promise of essential changes in existing models of care delivery. This book presents the current and future trends in the transformation of healthcare services in the Information Society Era and addresses the priorities within international informatics. The authors have provided an in depth study of internet enhanced healthcare services while mobile technology is also reviewed in the context of modern wireless technologies.
