Transitional Mathematics:

Transitions in Mathematics Education Ghislaine Gueudet, Marianna Bosch, Andrea A. diSessa, Oh Nam Kwon, Lieven Verschaffel, 2016-07-07 This book examines the kinds of transitions that have been studied in mathematics education research. It defines transition as a process of change and describes learning in an educational context as a transition process. The book focuses on research in the area of mathematics education and starts out with a literature review describing the epistemological, cognitive, institutional, and sociocultural perspectives on transition. It then looks at the research questions posed in the studies and their link with transition and examines the theoretical approaches and methods used. It explores whether the research conducted has led to the identification of continuous processes, successive steps, or discontinuities. It answers the question of whether there are difficulties attached to the discontinuities identified and, if so, whether the research proposes means to reduce the gap to create a transition. The book concludes with directions for future research on transitions in mathematics education.

Transitions Between Contexts of Mathematical Practices Guida de Abreu, Alan Bishop, Norma C. Presmeg, 2006-04-11 This book discusses mathematics learners in transition and their practices in different contexts: the institutional and socio-cultural framing of the transition processes involved and the communication and negotiation of mathematical meanings during transition. Providing both empirical studies and significant theoretical reflections, it will appeal to researchers and postgraduate students in mathematics education, cultural psychology, multicultural education, immigrant and indigenous education.

Rethinking the Mathematics Curriculum Celia Hoyles, Candia Morgan, Geoffrey Woodhouse, 2002-01-04 At a time when political interest in mathematics education is at its highest, this book demonstrates that the issues are far from straightforward. A wide range of international contributors address such questions as: What is mathematics and what is it for? What skills does mathematics education need to provide as technology advances? What are the implications for teacher education? What can we learn from past attempts to change the mathematics curriculum? *Rethinking the Mathematics Curriculum* offers stimulating discussions showing much is to be learnt from the differences in culture, national expectations, and political restraints revealed in the book. This accessible book will be of particular interest to policy makers, curriculum developers, educators, researchers, and employers, as well as the general reader.
