**Workflows for e-Science** Ian J. Taylor, Ewa Deelman, Dennis B. Gannon, Matthew Shields, 2007-12-31 This collection of articles on Work ows for e Science is very timely and portant Increasingly to attack the next generation of scienti c problems multidisciplinary and distributed teams of scientists need to collaborate to make progress on these new Grand Challenges Scientists now need to access and exploit computational resources and databases that are geographically distributed through the use of high speed networks

Virtual Organizations or VOs must be established that span multiple administrative domains and or institutions and which can provide appropriate authentication and authorization services and access controls to collaborating members Some of these VOs may only have a fleeting existence but the lifetime of others may run into many years The Grid community is attempting to develop both standards and middleware to enable both scientists and industry to build such VOs routinely and robustly This of course has been the goal of research in distributed computing for many years but now these technologies come with a new twist service orientation By specifying resources in terms of a service description rather than allowing direct access to the resources the IT industry believes that such an approach results in the construction of more robust distributed systems The industry has therefore united around web services as the standard technology

to implement such service oriented architectures and to ensure interoperability between different vendor systems *Book of Majors 2014* The College Board, 2013-07-02 The Book of Majors 2014 by The College Board helps students answer these questions What's the major for me Where can I study it What can I do with it after graduation Revised and refreshed every year this book is the most comprehensive guide to college majors on the market In depth descriptions of 200 of the most popular majors are followed by complete listings of every major offered at more than 3 800 colleges including four year and two year colleges and technical schools The 2014 edition covers every college major identified by the U S Department of Education over 1 200 majors are listed in all This is also the only guide that shows what degree levels each college offers in a major whether a certificate associate bachelor's master's or doctorate The guide features insights from the professors themselves on how each major is taught what preparation students will need other majors to consider and much more updated information on career options and employment prospects the inside scoop on how students can find out if a college offers a strong program for a particular major what life is like for students studying that major and what professional societies and accrediting agencies to refer to for more background on the major
