## **Soft Computing In Textile Sciences:**

*Soft Computing in Textile Sciences* Les M. Sztandera, Christopher Pastore, 2013-03-20 Textiles and computing have long been associated High volume and low profit margins of textile products have driven the industry to invest in high technology particularly in the area of data interpretation and analysis Thus it is virtually inevitable that soft computing has found a home in the textile industry Contained in this volume are six chapters discussing various aspects of soft computing in the field of textiles and apparel

**Soft Computing in Textile Engineering** Abhijit Majumdar, 2010-11-29 Soft computing refers to a collection of computational techniques which study model and analyse complex phenomena As many textile engineering problems are inherently complex in nature soft computing techniques have often provided optimum solutions to these cases Although soft computing has several facets it mainly revolves around three techniques artificial neural networks fuzzy logic and genetic algorithms The book is divided into five parts covering the entire process of textile production from fibre manufacture to garment engineering These include soft computing techniques in yarn manufacture and modelling fabric and garment manufacture textile properties and applications and textile quality evaluation Covers the entire process of textile production from fibre manufacture to garment engineering including artificial neural networks fuzzy logic and genetic algorithms Examines soft computing techniques in yarn manufacture and modelling fabric and garment manufacture Specifically reviews soft computing in relation to textile properties and applications featuring garment modelling and sewing machines

**Soft Computing in Measurement and Information Acquisition** Leon Reznik, Vladik Kreinovich, 2012-12-06 This volume covers the fields of measurement and information acquisition It contains a collection of papers representing the current research trends in these areas What are those trends The first one is the enormous growth in the amount of information and the amazing technologies which make this information available anywhere and anytime The second one is a substantial development of methods of the information presentation including to name just a few multimedia virtual environment computer animation The third one is the all time boosting demand for improving the quality of decisions made on the base of this information in various applications ranging from engineering to business Nowadays information acquisition should not only provide more information but also provide it in such a way as to assure effective and efficient processing of this information And here comes a relatively new methodology of soft computing Application of soft computing in measurement and information acquisition is considered in this volume

**Simulation in Textile Technology** D Veit, 2012-06-11 The use of mathematical modelling and computer simulation can vastly improve the quality efficiency and economic success of textile technology Simulation in textile technology provides a comprehensive review of the key principles applications and benefits of modelling for textile production After an introduction to modelling and simulation Simulation in textile technology goes on to review the principles and applications of the main types of model The book first discusses neural networks and their applications before going on to explore evolutionary methods and fuzzy logic It then

considers computational fluid dynamics and finite element modelling The modelling of fibrous structures and yarns are considered in the following chapters along with wound packages woven braided and knitted structures The book concludes by reviewing the simulation of textile processes and machinery With its distinguished editor and team of expert contributors Simulation in textile technology is a valuable reference tool for all those involved in both developing models of textile processes and those applying them to improve process efficiency and product quality Provides a comprehensive review of the key principles applications and benefits of modelling for textile production Discusses neural networks and their applications before going on to explore evolutionary methods and fuzzy logic Considers the modelling of fibrous structures and yarns along with wound packages woven braided and knitted structures Applied Decision Support with Soft Computing Xinghuo Yu,2012-12-06 Soft computing has provided sophisticated methodologies for the development of intelligent decision support systems Fast advances in soft computing technologies such as fuzzy logic and systems artificial neural networks and evolutionary computation have made available powerful problem representation and modelling paradigms and learning and optimisation mechanisms for addressing modern decision making issues This book provides a comprehensive coverage of up to date conceptual frameworks in broadly perceived decision support systems and successful applications Different from other existing books this volume predominately focuses on applied decision support with soft computing Areas covered include planning management finance and administration in both the private and public sectors *Soft Computing in Textile Engineering* A. Majumdar,2011-01-15 *Woven Textiles* K Gandhi,2012-08-13 Traditionally used in apparel and interior fabrics woven textiles are increasingly being employed in a variety of technical applications Woven textiles Principles developments and applications provides an essential overview of the manufacture structure and application of these important textiles Beginning with an introduction to the fibres and yarns used in weaving part one goes on to explore key preparatory techniques and the fundamentals of weaving technology The characteristics of woven structures are then discussed in greater depth in part two alongside investigation into the use of computer assisted design CAD systems techniques for modelling the structure of woven fabrics and methods for the manufacture of 3D woven structures Part three focuses of the application of woven textiles to a wide range of technologies The use of woven textiles in automotive interiors and other transport applications is discussed along with woven apparel fabrics geotextiles hollow woven fabrics and woven textiles for medical applications With its distinguished editor and international team of expert contributors Woven textiles Principles developments and applications is an indispensable guide for all designers engineers and technicians involved in the design manufacture and use of woven textiles It also provides a useful overview of woven textile processing and applications for academics and students Provides an essential overview of the manufacture structure and application of woven textiles Explores key preparatory techniques and the fundamentals of weaving technology and discusses the characteristics of woven structures Covers the use of computer assisted design CAD systems and methods for the
