Nivat, 1998-03-11 This book constitutes the refereed proceedings of the First International Conference on the Foundations of Software Science and Computation Structures FoSSaCS 98 held as part of the Joint European Conferences on Theory and Practice of Software ETAPS 98 in Lisbon Portugal in March April 1998 The 19 revised full papers presented in the book were carefully selected from a total of 44 submissions Among the topics covered are formal specification automata theory term rewriting and rewriting systems process algebras formal language theory type theory event structures and iteration theory      **6th European Software Engineering Conference** Mehdi Jazayeri, 1998      **Invariant Probabilities of Markov-Feller Operators and Their Supports** Radu Zaharopol, 2005-01-28 This book

covers invariant probabilities for a large class of discrete time homogeneous Markov processes known as Feller processes. These Feller processes appear in the study of iterated function systems with probabilities convolution operators and certain time series. From the reviews: A very useful reference for researchers wishing to enter the area of stationary Markov processes both from a probabilistic and a dynamical point of view. *MONATSCHEFTE FÜR MATHEMATIK*

**Foundations of Software Technology and Theoretical Computer Science** S. Ramesh, 1997-11-28 This book constitutes the refereed proceedings of the 17th International Conference on Foundations of Software Technology and Theoretical Computer Science FSTTCS 97. The 18 revised full papers presented were selected from a total of 68 submissions. Also included are five invited papers by Ed Clarke, Deepak Kapur, Madhu Sudan, Vijaya Ramachandran, and Moshe Vardi. Among the topics addressed are concurrency, Petri nets, graph computations, program verification, model checking, recursion theory, rewriting, and error correcting codes.

*Foundations of Component-Based Systems* Gary T. Leavens, Murali Sitaraman, 2000-03-28 This collection of articles by well known experts was originally published in 2000 and is intended for researchers in computer science, practitioners of formal methods, and computer programmers working in safety critical applications or in the technology of component based systems. The work brings together several elements of this area that were fast becoming the focus of much research and practice in computing. The introduction by Clemens Szyperski gives a snapshot of research in the field. About half the articles deal with theoretical frameworks, models, and systems of notation; the rest of the book concentrates on case studies by researchers who have built prototype systems and present findings on architectures, verification. The emphasis is on advances in the technological infrastructure of component based systems: how to design and specify reusable components and how to reason about, verify, and validate systems from components. Thus the book shows how theory might move into practice.

*Intelligent Hypertext* Charles Nicholas, James Mayfield, 1997-10-15 This book constitutes a coherent anthology consisting of invited chapter length papers on intelligent hypertext techniques with special emphasis on how to apply these techniques to the World Wide Web. The book provides an introductory preface by the volume editors and chapters on information comprehension through hypertext, efficient techniques for adaptive hypermedia, annotated 3D environments on the Web, user models for customized hypertext, conceptual analysis of hypertext, two level models of hypertext, the TELLTALK dynamic hypertext environment, hypertext for collaborative authoring, information retrieval, and information agents.

**Coordination Languages and Models** Paolo Ciancarini, Alexander L. Wolf, 2003-07-31 We welcome you to Coordination 99, the third in a series of conferences dedicated to an important perspective on the development of complex software systems. That perspective is shared by a growing community of researchers interested in models, languages, and implementation techniques for coordination. The last decade has seen the emergence of a class of models and languages variously termed coordination languages, coordination languages, architectural description languages, and agent oriented programming languages. These formalisms provide a clean separation between individual software components and their interaction within the

overall software organization This separation makes complex applications more tractable supports global analysis and enhances the reuse of software components The proceedings of the previous two conferences on this topic were published by Springer as Lecture Notes in Computer Science 1061 and 1282 This issue of LNCS containing the papers presented at Coordination 99 continues the tradition of carefully selected and high quality papers representing the state of the art in coordination technology In response to the call for papers were received 67 submissions from which 26 papers were accepted These proceedings also contain abstracts for posters presented at the conference This year's program features invited talks by Rocco De Nicola and Danny B Lange Reading through the papers we expect that you may be surprised by the variety of disciplines within computer science that have embraced the notion of coordination In fact we expect this trend to continue and hope that you will contribute to the on going exploration of its strengths weaknesses and applications
