Proceedings of the IRE, 1962 **Aeronautical Engineering Review**, 1957 **Proceedings of the IRE**. Institute of Radio Engineers, 1962 **Scientific and Technical Aerospace Reports**, 1974 **Advanced Sensor and Detection Materials** Ashutosh Tiwari, Mustafa M. Demir, 2014-06-09 Presents a comprehensive and interdisciplinary review of the major cutting edge technology research areas especially those on new materials and methods as well as advanced structures and properties for various sensor and detection devices The development of sensors and detectors at macroscopic or nanometric scale is the driving force stimulating research in sensing materials and technology for accurate detection in solid liquid or gas phases contact or non contact configurations or multiple sensing The emphasis on reduced scale detection techniques requires the use of new materials and methods These techniques offer appealing perspectives given by spin crossover organic inorganic and composite materials that could be unique for sensor fabrication The influence of the length composition and conformation structure of materials on their properties and the possibility of adjusting sensing properties by doping or adding the side groups are indicative of the starting point of multifarious sensing The role of intermolecular interactions polymer and ordered phase formation as well as behavior under pressure and magnetic and electric fields are also important facts for processing ultra sensing materials The 15 chapters written by senior researchers in Advanced Sensor and Detection Materials cover all these subjects and key features under three foci 1 principals and perspectives 2 new materials and methods and 3 advanced structures and properties for various sensor devices *Physical Methods of Chemistry, Investigations of Surfaces and Interfaces* Bryant W. Rossiter, Roger C. Baetzold, 1993-06-15 Each volume of this series heralds profound changes in both the perception and practice of chemistry This edition presents the state of the art of all important methods of instrumental chemical analysis measurement and control Contributions offer introductions together with sufficient detail to give a clear understanding of basic theory and apparatus involved and an appreciation of the value potential and limitations of the respective techniques The emphasis of the subjects treated is on method rather than results thus aiding the investigator in applying the techniques successfully in the laboratory **Chemical and Engineering News**, 1961 Progress in Optics, 2001-12-17 This volume presents six review articles devoted to various topics of current interest both in classical and in quantum optics The first article by S Ya Kilin entitled Quanta and Information is concerned with a multidisciplinary subject which involves optics information theory programming and discrete mathematics The second article Optical Solitons in Periodic Media with Resonant and Off Resonant Nonlinearities by G Kurizki A E Kozhokin T Optatry and B Malomed reviews the properties of optical solitons in periodic nonlinear media The article which follows deals with an effect and its inverse which is a manifestation of hindrance and enhancement respectively of the evolution of a quantum system by an external agent such as a detection apparatus The fourth article discusses the current status of a relatively new branch of physical optics sometimes called singular optics The next two articles respectively present a review

of advances in two photon interferometry and their relation to investigations of the foundations of quantum theory and an examination of transverse mode shaping and selection in laser resonators **The Publishers' Trade List Annual** ,1978
