Structure To Resemblance:

Metaphors and Analogies in Sciences and Humanities Shyam Wuppuluri, A. C. Grayling, 2022-05-30 In this highly interdisciplinary volume we systematically study the role of metaphors and analogies in misshaping our understanding of the world. Metaphors and analogies occupy a prominent place in scientific discourses as they do in literature, humanities, and at the very level of our thinking itself. But when misused, they can lead us astray, blinding our understanding inexorably. How can metaphors aid us in our understanding of the world? What role do they play in our scientific discourses and in humanities? How do they help us understand and skillfully deal with our complex socio-political scenarios? Where is the dividing line between their use and abuse? Join us as we explore some of these questions in this volume. [Next Generation Intelligent Environments](#)

Stefan Ultes, Florian Nothdurft, Tobias Heinroth, Wolfgang Minker, 2015-11-30 This book covers key topics in the field of intelligent ambient adaptive systems. An extensive introduction to state-of-the-art statistical dialog management for intelligent environments. Approaches are introduced on how Trust is reflected during the dialog with the system. **Ten Lectures on Cognitive Modeling**

Francisco José Ruiz de Mendoza Ibáñez, 2020-11-04 These lectures deal with the role of cognitive modelling in language-based meaning construction. To make meaning, people use a small set of principles which they apply to different types of conceptual characterizations. This yields predictable meaning effects which, when stably associated with specific grammatical patterns, result in constructions or fixed form meaning pairings. This means that constructional meaning can be described on the basis of the same principles that people use to make inferences. This way of looking at pragmatics and grammar through cognition allows us to relate a broad range of pragmatic and grammatical phenomena among them: argument structure, characterizations, implicational, illocutionary, and discourse structure, and such figures of speech as metaphor, metonymy, hyperbole, and irony. **Reprint and Circular Series of the National Research Council**, 1921

Neural Machines: A Defense of Non-Representationalism in Cognitive Neuroscience Matej Kohár,2023-03-09 In this book Matej Kohar demonstrates how the new mechanistic account of explanation can be used to support a non representationalist view of explanations in cognitive neuroscience and therefore can bring new conceptual tools to the non representationalist arsenal Kohar focuses on the explanatory relevance of representational content in constitutive mechanistic explanations typical in cognitive neuroscience The work significantly contributes to two areas of literature 1 the debate between representationalism and non representationalism and 2 the literature on mechanistic explanation Kohar begins with an introduction to the mechanistic theory of explanation focusing on the analysis of mechanistic constitution as the basis of explanatory relevance in constitutive mechanistic explanation He argues that any viable analysis of representational contents implies that content is not constitutively relevant to cognitive phenomena The author also addresses objections against his argument and concludes with an examination of the consequences of his account for both traditional cognitive neuroscience and non representationalist alternatives This book is of interest to readers in philosophy of mind cognitive science and neuroscience
