The Female Advantage:

The Female Advantage Sally Helgesen, 2011-03-09 Now in Currency paperback Sally Helgesen's classic study of female leaders and how their strategies represent a highly successful revision of male leadership styles Sixty thousand copies in print In her bestselling 1990 book Sally Helgesen discovered that men and women approach work in fundamentally different ways Many of these differences hold distinct advantages for women who excel at running organizations that foster creativity cooperation and intuitive decision making power necessities for companies of the twenty first century Helgesen's findings reveal that organizations run by women do not take the form of the traditional hierarchical pyramid but more closely resemble a web where leaders reach out not down to form an interrelating matrix built around a central purpose The strategy of the web concentrates power at the center by drawing others closer and by creating communities where information sharing is essential She presents her findings through unique closely detailed accounts of four successful women business leaders Frances Hesselbein of Girl Scouts USA Barbara Grogan of Western Industrial Contractors Nancy Badore of Ford Motor Company's Executive Development Center and Dorothy Brunson of Brunson Communications Helgesen observes their meetings listens to their phone calls and conferences and reads their correspondence Her diary studies document how women leaders make decisions schedule their days gather and disperse information motivate others delegate tasks structure their companies hire and fire She chronicles how their experiences as women wives mothers friends sisters daughters contribute to their leadership style

Overlap of Neural Systems for Processing Language and Music McNeel Gordon Jantzen, Edward W. Large, Cyrille Magne, 2016-07-29 The interplay between musical training and speech perception continues to intrigue researchers in the areas of language and music alike Historically language function has been attributed to brain regions localized predominately in left hemisphere whereas music has been attributed to right hemisphere dominant regions Recent studies demonstrating neural overlap for processing speech and music and enhanced speech perception and production in musicians suggest that these regions may be inextricably intertwined The extent of neural overlap between music and speech remains hotly debated with surprisingly little empirical research exploring specific neural homologs and analogs Moreover despite recognition that shared processes likely exist throughout development and depend upon an individual's acoustic experiences even less research exists on how overlapping neural structures for music and language are affected by developmental trajectories Nonetheless the field is well poised to address key empirical questions in part because of the recent development of new theories that address the neural and developmental interaction between music and language processing in conjunction with the broad availability of sophisticated tools for quantifying brain activity and dynamics To understand the overlap of neural structures for language and music processing research is needed to identify those specific functions of each that influence the other with areas for enhanced perception of pitch and onset time having already been targeted Research is also needed to identify the extent to which this overlap is developed in infancy or early childhood and the process by which it affects neural reorganization plasticity and trainability in adulthood For this research topic we would like to further explore the relationship between language and music in the brain from two perspectives 1 understanding the nature of shared neural and cognitive processing for music and language and 2 understanding the developmental trajectory of these neural systems and how they are influenced by experience We seek to gather technically diverse original research articles that present new empirical findings relevant to understanding 1 When in the brain acoustic information becomes processed specifically as language or music The shared and independent neural structures for processing music and language 3 How acoustic experiences such as musical training influence overlap of neural structures for language and music 4 How the overlap of processing regions changes over time due to experiences at any developmental stage

Whither Opportunity? Greg J. Duncan, Richard J. Murnane, 2011-09-01 As the incomes of affluent and poor families have diverged over the past three decades so too has the educational performance of their children But how exactly do the forces of rising inequality affect the educational attainment and life chances of low income children In *Whither Opportunity* a distinguished team of economists sociologists and experts in social and education policy examines the corrosive effects of unequal family resources disadvantaged neighborhoods insecure labor markets and worsening school conditions on K-12 education This groundbreaking book illuminates the ways rising inequality is

undermining one of the most important goals of public education the ability of schools to provide children with an equal chance at academic and economic success The most ambitious study of educational inequality to date *Whither Opportunity* analyzes how social and economic conditions surrounding schools affect school performance and children s educational achievement The book shows that from earliest childhood parental investments in children s learning affect reading math and other attainments later in life Contributor Meredith Phillip finds that between birth and age six wealthier children will have spent as many as 1 300 more hours than poor children on child enrichment activities such as music lessons travel and summer camp Greg Duncan George Farkas and Katherine Magnuson demonstrate that a child from a poor family is two to four times as likely as a child from an affluent family to have classmates with low skills and behavior problems attributes which have a negative effect on the learning of their fellow students As a result of such disparities contributor Sean Reardon finds that the gap between rich and poor children s math and reading achievement scores is now much larger than it was fifty years ago And such income based gaps persist across the school years as Martha Bailey and Sue Dynarski document in their chapter on the growing income based gap in college completion *Whither Opportunity* also reveals the profound impact of environmental factors on children s educational progress and schools functioning Elizabeth Ananat Anna Gassman Pines and Christina Gibson Davis show that local job losses such as those caused by plant closings can lower the test scores of students with low socioeconomic status even students whose parents have not lost their jobs They find that community wide stress is most likely the culprit Analyzing the math achievement of elementary school children Stephen Raudenbush Marshall Jean and Emily Art find that students learn less if they attend schools with high student turnover during the school year a common occurrence in poor schools And David Kirk and Robert Sampson show that teacher commitment parental involvement and student achievement in schools in high crime neighborhoods all tend to be low For generations of Americans public education provided the springboard to upward mobility This pioneering volume casts a stark light on the ways rising inequality may now be compromising schools functioning and with it the promise of equal opportunity in America

Unequal Attainments Anthony Francis Heath, Yaël Brinbaum, 2014-10-09 The volume explores the nature and extent of ethnic inequalities in education in ten major western countries The focus is on differences between ethnic groups and between receiving countries Are some minorities more successful and if so why Why might some countries be more favourable environments for educational progress than others *Cognitive Abilities and Educational Outcomes* Monica Rosén, Kajsa Yang Hansen, Ulrika Wolff, 2016-10-03 This book addresses problems and challenges that face educational measurement at a time when multipurpose usage of observational data from educational assessments tests and international surveys has become a growing global trend While the construction of educational measures and use of educational data offer many opportunities they also require awareness of the numerous threats to validity and methods of reducing such threats Written by leading international scholars the book demonstrates the complexity of educational measurement by addressing

three broad and interrelated topics The first part discusses cognitive abilities including studies on fluid intelligence its improvement and its links to aptitude tests for admission to higher education The second part focuses on the effects of school and teacher related factors on school outcomes at individual and group levels and uses international studies to analyze causes The third part presents analytical techniques and measurement methods to improve reliability for example factor analysis using Bayesian estimators bi factor analysis model misfit and solutions and discusses balance issues in reporting test results The book provides examples of state of the art analytical techniques for pursuing fundamental research problems and the latest advances in measurement methods with a focus on validity improvement Eminent researchers discuss and provide insights into questions such as Is it possible to train individuals to think at a higher level than normal for their age What determines prospective preschool teachers skill to perceive mathematics related preschool situations Can international indicator design and instruments be improved to use trends and national context variables more efficiently Can indicator data at national school and class levels be compared easier Are value added measures of teacher effectiveness valid when it comes to hiring and promoting teachers Is money better spent on teacher training than on smaller class size How do theory and empirical statistical data intertwine in building structures of understanding This book is inspired by the career and personal influence of the Swedish scholar Professor Jan Eric Gustafsson renowned for his research on individual differences especially the structure of cognitive abilities and on the effects of education on knowledge and skills *The Eugenics Review* ,1919
