The Mathematicians Mind:

The Mathematician's Mind Jacques Hadamard, 1996-10-20 Fifty years ago when Jacques Hadamard set out to explore how mathematicians invent new ideas he considered the creative experiences of some of the greatest thinkers of his generation such as George Polya Claude L vi Strauss and Albert Einstein It appeared that inspiration could strike anytime particularly after an individual had worked hard on a problem for days and then turned attention to another activity In exploring this phenomenon Hadamard produced one of the most famous and cogent cases for the existence of unconscious mental processes in mathematical invention and other forms of creativity Written before the explosion of research in computers and cognitive science his book originally titled *The Psychology of Invention in the Mathematical Field* remains an important tool for exploring the increasingly complex problem of mental life The roots of creativity for Hadamard lie not in consciousness but in the long unconscious work of incubation and in the unconscious aesthetic selection of ideas that thereby pass into consciousness His discussion of this process comprises a wide range of topics including the use of mental images or symbols visualized or auditory words meaningless words logic and intuition Among the important documents collected is a letter from Albert Einstein analyzing his own mechanism of thought *The Mind of the Mathematician* Michael

Fitzgerald, Ioan James, 2007-07-16 An intriguing look at the psychology and personality of mathematicians with profiles of twenty prominent figures in the field What makes mathematicians tick How do their minds process formulas and concepts that for most of the rest of the world's population remain mysterious and beyond comprehension Is there a connection between mathematical creativity and mental illness In *The Mind of the Mathematician* internationally famous mathematician Ioan James and accomplished psychiatrist Michael Fitzgerald look at the complex world of mathematics and the mind Together they explore the behavior and personality traits that tend to fit the profile of a mathematician They discuss mathematics and the arts savants gender and mathematical ability and the impact of autism personality disorders and mood disorders These topics together with a succinct analysis of some of the great mathematical personalities of the past three centuries combine to form an eclectic and fascinating blend of story and scientific inquiry The authors careful treatments are an especially welcome addition to a genre riddled with apocryphal anecdotes and shoddy scholarship Nature **The**
