

The result that the area under $y = x^2$ is $\frac{1}{3}x^3$ can easily be deduced. By rotating the graph through a right angle we can infer that the area under $y = \sqrt{x}$ is $\frac{2}{3}x\sqrt{x}$:

which can be fitted into a pattern—I spare the details—by writing it as $x^1\sqrt{x}/1\frac{1}{2}$, whence one is driven to interpret \sqrt{x} as $x^{1/2}$. Other interpretations, such as x^0 as 1, also follow from discussion and generalisation of the situation. The mathematical ideas and concepts and knowledge that can flow, in two or three lessons, from this piece of enquiry have always impressed me. I am sure there are many corresponding topics now available from a prodigious range if only teachers would draw on them.

I conclude with this item because it is a tribute to the width of vision of my own great master. I offer it as a final comment from my own voice from the past: those who neglect the past may be fated to rediscover it. May I wish you all an enriched life of professional success and happiness.
