[Climate Change in Human History](#) Benjamin Lieberman, Elizabeth Gordon, 2021-12-02 PROSE Award for Excellence in Humanities Finalist 2023 Climate Change and Human History provides a concise introduction to the relationship between human beings and climate change throughout history Starting hundreds of thousands of years ago and going up to the present day this book illustrates how natural climate variability affected early human societies and how human activity is now leading to drastic changes to our climate Taking a chronological approach the authors explain how climate change created opportunities and challenges for human societies in each major time period covering themes such as phases of climate and history climate shocks the rise and fall of civilizations industrialization accelerating climate change and our future outlook This 2nd edition includes a new chapter on the explosion of social movements protest groups and key individuals since 2017 and the implications this has had on the history of climate change an improved introduction to the Anthropocene and extra content on the basic dynamics of the climate system alongside updated historiography With more case studies images and individuals throughout the text the

second edition also includes a glossary of terms and further reading to aid students in understanding this interdisciplinary subject. An ideal companion for all students of environmental history, *Climate Change and Human History* clearly demonstrates the critical role of climate in shaping human history and of the experience of humans in both adapting to and shaping climate change. *Media, Politics and Environment* Detlef Briesen, Sarada Prasanna Das, 2023-07-15. Environmental protection has not equally established itself as a permanent fixture in the political systems of all countries to date. Governments and entire societies have responded to environmental challenges in a variety of ways and concrete environmental policy is still a highly national matter. Moreover, the perception of environmental problems varies considerably on a global scale. The reasons normally cited for these differences largely stem from the environmental policy debates themselves, e.g. poverty, ignorance, capital interests, etc. In contrast, this book shows that concrete environmental policy emerges from a complex interplay of mass media and political conflicts. First, the mass media provide the framework for national environmental policy through agenda setting, framing, and scandalization. Second, the mass media thereby change values in the political and social discourse, e.g. by altering the perception of global commons and expanding the possibilities of interest articulation. And third, this can lead to political decision-making processes in which legal and other measures for environmental protection are enforced. The book systematically compares industrialized countries such as Germany and Japan with several rapidly emerging countries in South and Southeast Asia. **Darkening Air: The Invisible Threat** Dr Ajay Kumar Gupta, Pritanshu, 2014-06-05. The book is titled as such as it answers all the basic questions that arise in mind regarding air pollution. With the advent of technology, we have invited many problems. The deterioration of air is one of the several aftermaths. It has been discussed for a long time but to no avail, as problems due to air pollution are increasing day by day. The situation is horrendous in developing countries. This book discusses all the aspects of encumbering air pollution, including its causes and effects. The book explains each and every topic in simple and easy language. The book includes empirical data of various eminent organizations. It also embodies indoor pollution, which is gaining its presence very fast. *Geoeconomics of the Sustainable Development Goals* Lucía Morales, Bernadette Andreosso-O'Callaghan, Daniel Rajmil, 2025-03-31. In 2015, the United Nations introduced its very ambitious 2030 Agenda, known as the Sustainable Developmental Goals or SDGs. The SDGs provide a comprehensive list of goals and targets to address social, economic, and environmental issues. In this book, different areas of expertise are brought together, examining the main challenges associated with the effects of climate change and the broader scope of the SDGs through the lenses of the geo-economics and geopolitics of sustainability. The book sheds light on the growing connections between the economic and financial fields and their impact on defining the international order and its economy. It examines the importance of trade and economic integration in promoting sustainable development and achieving the SDGs. The role of supranational organisations like the United Nations, the World Trade Organisation, and the IMF in supporting the SDGs within the context of the world's most advanced economies and those less developed, the

influence of economic diplomacy and geopolitical rivalries on progress towards the SDGs the changing global balance of power and the significance of technology and innovation as well as the role of emerging and less developed economies in enabling sustainable development The book offers insights into practical issues linked to theory and applied frameworks underscoring the significant challenges associated with sustainable development the global economic and political reality and how political tensions affect the global economy The book supports students through the established disciplines of economics finance political science and law and provides academics with new research and theory building tools

Export Product Quality, Renewable Energy, and Sustainable Production, 3rd edition Umer Shahzad, Gagan Deep Sharma, Lianbiao Cui, John Mendy, 2025-11-20

Economic development has long been acknowledged for its beneficial effects on human well being In the context of economic globalization and vertical specialization increasing the quality of export products is more critical and necessary to export success and sustainable development The product's quality is inextricably linked to its manufacture and production which need various types of energy and raw materials Meanwhile the adoption of more environmentally friendly and cleaner energy sources contributes to the achievement of sustainable production Therefore product quality may provide a new perspective from which to investigate the systematic relationship between greener and renewable energy sources sustainable production and environmental regulations as well as the nature of export competitiveness Generally export product quality has referred to the quality of manufactured products within the product lines Quality refers to the relative price of a country's varieties within their respective product lines Product sophistication assesses the composition of the aggregate exports Different varieties of same product at per quality level are being produced by several developing and emerging economies Within any given product line quality converges both conditionally and unconditionally to the world's benchmark increases in institutional quality and human capital are associated with faster quality upgrading In turn faster growth in quality is associated with more rapid output growth The existing literature has mostly concentrated on the question of whether environmental regulation enhances or erodes export competitiveness offering some valuable insights into Porter's theory but it lacks a coherent theoretical framework Little research has been done to examine the relationship between export product quality and renewable energy sources manufacturing and overall sustainable production calling for advancement of the scholarship to tackle this burning issue Numerous concerns have been expressed over the appalling connection between sustained development industry and environmental protection The United Nations UN adopted the 2030 Agenda for Sustainable Development in 2015 to balance economic social and environmental development through the introduction of 17 Sustainable Development Goals SDG which encouraged researchers in trade environment energy and related fields to adopt an integrative rather than isolative approach This Research Topic is dedicated to the study of the environment through the lenses of export product quality export policies and sustainable production The aim is to advance knowledge in the fields of export quality trade perspectives renewable energy the

environment and sustainable production through the dissemination of research that promotes holistic sustainability for the greater welfare of humanity This topic will prioritize research focusing on emerging and developing economies Academic scholars and researchers must both test hypotheses and put forward ideas for new solutions For example it is assumed that higher quality products require expensive inputs and resources for manufacturing It must also provide strategies for a speedy and economically viable transition to renewable energy This Research Topic is a step in this direction
