Solidification and Casting: Brian Cantor, K O'Reilly, 2002-12-06 Written by leading experts in their respective fields Solidification and Casting provides a comprehensive review of topics fundamental to metallurgy and materials science as well as indicates recent trends From an industrial perspective the book begins with chapters on the casting techniques most commonly used in industry today It then describes the underlying science fundamental to solidification mechanisms including fluid flow the effects of cooling rates modern simulation and modelling methods in use and their application in various casting scenarios Next the authors consider the microstructure of cast materials and their defects and explore how different casting processes can control these parameters The book concludes with the most recent developments in the field and discusses new processes and materials such as novel alloys and composites metallic glasses ceramics and superconducting oxides

Science and Engineering of Casting Solidification, Second Edition Doru Michael Stefanescu, 2008-12-03 Stefanescu here attempts to describe solidification theory through the complex mathematical apparatus required for a fundamental treatment of the problem The mathematics is however restricted to the elements essential to attain a working knowledge in the field This is in line with the main goal of the book which is to educate the reader in the fast moving area of computational modeling of solidification of castings A special effort has been made to introduce the reader to the latest developments in solidification theory including in this second edition a new chapter on semi solid casting

Directional Solidification of Steel Castings R. Wlodawer, 2013-10-22 Directional Solidification of Steel Castings summarizes the results of a large number of investigations mostly scientific in character on the directional solidification of steel castings The influence of design on the technical possibilities of producing casting in the foundry is examined Diagrams simple basic rules and formulae are provided along with many practical examples This book is comprised of 16 chapters and begins with an introduction to the technical and psychological aspects of steel casting before turning to a discussion of the influence of shape and dimensions on the time it takes for castings to solidify The thermal gradient feeder heads and cavities in steel castings are then considered In particular the effect of the thermal gradient on solidification and feeding range are examined

Methods for increasing the thermal gradient in the casting are described including the use of mold heating pads breaker cores or Washburn cores external cooling iron chills cooling fins internal chills and exothermic pads Cavities in steel castings which are commonly mistaken for true shrinkage cavities are also analyzed This monograph is particularly suitable for foundry managers foremen technicians casting designers and students *Materials Processing During Casting* Hasse Fredriksson,Ulla Åkerlind,2006-05-12 Casting is one of the most important processes in materials technology In this unique book each step in the casting and solidification process is described and models are set up which in many cases can be approximated by simplified analytical expressions All casting methods are featured including component casting ingot casting and continuous casting Applications of the results are given in numerous worked examples within the text Conclusions on how to avoid cracks solidification pores slag inclusions and other defects of the castings can be drawn from the theoretical models These conclusions are based on research results which together give an idea of the development in the manufacture of castings Most chapters conclude with a number of exercises answers to which are given at the end of the book The accompanying Guide to Exercises provides the complete solutions to each of the exercises **Casting Design and Performance** ,2009 **Advances in the Science and Engineering of Casting Solidification** Laurentiu Nastac,Baicheng Liu,Hasse Fredriksson,Jacques Lacaze,Chun-Pyo Hong,Adrian Catalina,Andreas Buhrig-Polaczek,Daan M.
