

== vs. equals() for Strings Explained

- String is a class type
- What happens when you have

```
String s1 = new String("Hello");  
String s2 = new String("Hello");  
boolean strEqual = (s1 == s2);
```

- strEqual is false! Why?
 - s1 and s2 store different addresses!

Strings Are False

Bacon

Strings Are False:

The Strings are False Louis MacNeice,1965 An autobiography written in the 1940s but set aside and published for the first time after MacNeice s death in 1965 This incomplete account of himself is masterly and the best thing Louis MacNeice ever wrote in prose In this book he talks about himself freely most intelligently incisively and without self pity MacNeice s evaluation of himself at Marlborough Oxford and Birmingham and in the thirties exhibits more luminously than any document so far published the effect of that time and its diversely pulling forces within one sensual and acute and honest makar in the upper middle classes Geoffrey Grigson Guardian

The strings are false, by louis macneice Louis Macneice,1965

The Strad ,1896 **The Violinist** ,1914 **Animated Problem Solving** Marco T. Morazán,2022-01-13 This textbook is about systematic problem solving and systematic reasoning using type driven design There are two problem solving techniques that are emphasized throughout the book divide and conquer and iterative refinement Divide and conquer is the process by which a large problem is broken into two or more smaller problems that are easier to solve and then the solutions for the smaller pieces are combined to create an answer to the problem Iterative refinement is the process by which a solution to a problem is gradually made better like the drafts of an essay Mastering these techniques are essential to becoming a good problem solver and programmer The book is divided in five parts Part I focuses on the basics It starts with how to write expressions and subsequently leads to decision making and functions as the basis for problem solving Part II then introduces compound data of finite size while Part III covers compound data of arbitrary size like e g lists intervals natural numbers and binary trees It also introduces structural recursion a powerful data processing strategy that uses divide and conquer to process data whose size is not fixed Next Part IV delves into abstraction and shows how to eliminate repetitions in solutions to problems It also introduces generic programming which is abstraction over the type of data processed This leads to the realization that functions are data and perhaps more surprising that data are functions which in turn naturally leads to object oriented programming Part V introduces distributed programming i e using multiple computers to solve a problem This book promises that by the end of it readers will have designed and implemented a multiplayer video game that they can play with their friends over the internet To achieve this however there is a lot about problem solving and programming that must be learned first The game is developed using iterative refinement The reader learns step by step about programming and how to apply new knowledge to develop increasingly better versions of the video game This way readers practice modern trends that are likely to be common throughout a professional career and beyond
