**Challenging Glass 3** Freek Bos, Christian Louter, Rob Nijse, Fred Veer, 2012 There are two things everybody knows about glass it is transparent and it breaks These are also the properties that constitute the challenge of glass as an architectural and structural material This book presents papers from the third Challenging Glass Conference CGC3 held at the Technical University TU Delft the Netherlands in June 2012 The conference brings together glass engineering research and design specialists Papers are grouped under seven topic headings project and case studies joints fixings and adhesives strength stability and safety a category which includes a quarter of all the papers presented at the conference laminates and composite design curved and bended glass architectural design and lighting and finally glass in facades Glass remains one of the most exciting materials available to designers and architects today This book will be of interest to all those involved in working with glass in an architectural and structural context

Structure Glass Technology Katherine Kristen Leitch, 2005 Glass cannot compete with steel in terms of strength or durability but it is the only structural material that offers the highly sought after qualities of translucency and transparency The use of glass has evolved from purely decorative or architectural to structural encouraging glass technologies to advance concurrently with increased demand As a result contemporary methods used to produce structural glass provide excellent strength characteristics particularly after treatments including annealing tempering and heat strengthening which reduce its vulnerability to cracking and sudden brittle failure Its modulus of elasticity is roughly equal to that of aluminum greater than both wood and concrete but doesn't allow any plastic deformation Lamination dramatically improves both the strength and durability of glass by joining strengthened layers of glass using resin or a polyvinyl butyral foil No comprehensive design code is currently available to aid in the design of structural glass members The behavior of glass is examined through a variety of structural applications including beams columns walls roofs and floors and domes Case studies are explored to underscore the technical principles discussed for each structural glass element utilized in place of more traditional building materials
