Structure Of Argument:

The Structure of Argument Annette Rottenberg, Donna Winchell, 2024-11 **The Structure of Argument** Annette T Rottenberg, Donna Haisty Winchell, 2020-09-15 **Argument Structure** Douglas N. Walton, 1996 Provides a systematic survey clarification and assessment of the different tests currently used to carry out tasks involved in argument identification and presents new methods for determining missing premises determining whether an argument is linked or convergent and deciding whether a given test of discourse contains an argument or not For courses in informal logic critical thinking argumentation and logical reasoning Also of interest to those in speech communication rhetoric discourse analysis and education Annotation copyrighted by Book News Inc Portland OR *Argument Structure*: James B. Freeman, 2011-03-23 This monograph first presents a method of diagramming argument macrostructure synthesizing the standard circle and arrow approach with the Toulmin model A theoretical justification of this method through a dialectical understanding of argument a critical examination of Toulmin on warrants a thorough discussion of the linked convergent distinction and an account of the proper reconstruction of enthymemes follows **A lexicalist account of argument structure** Stefan Müller, 2018 There are two prominent schools in linguistics Minimalism Chomsky and Construction Grammar Goldberg Tomasello Minimalism comes with the claim that our linguistic capabilities consist of an abstract binary combinatorial operation Merge and a lexicon Most versions of Construction Grammar assume that language consists of flat phrasal schemata that contribute their own meaning and may license additional arguments This book examines a variant of Lexical Functional Grammar which is lexical in principle but was augmented by tools that allow for the description of phrasal constructions in the Construction Grammar sense These new tools include templates that can be used to model inheritance hierarchies and a resource driven semantics The resource driven semantics makes it possible to reach the effects that lexical rules had for example remapping of arguments by semantic means The semantic constraints can be evaluated in the syntactic component which is basically similar to the delayed execution of lexical rules So this is a new formalization that might be suitable to provide solutions to longstanding problems that are not available for other formalizations While the authors suggest a lexical treatment of many phenomena and only assume phrasal constructions for selected phenomena like benefactive and resultative constructions in English it can be shown that even these two constructions should not be treated phrasally in English and that the analysis would not extend to other languages as for instance German I show that the new formal tools do not really improve the situation and many of the basic conceptual problems remain Since this specific proposal fails for two constructions it follows that proposals in the same framework that assume phrasal analyses for all constructions are not appropriate either The conclusion is that lexical models are needed and this entails that the schemata that combine syntactic objects are rather abstract as in Categorical Grammar Minimalism HPSG and standard LFG On the other hand there are constructions that should be treated by very specific phrasal schemata as in Construction Grammar and

LFG and HPSG So the conclusion is that both schools are right and wrong and that a combination of ideas from both camps is needed

The Structure of Arguments I. M. Schlesinger, Tamar Keren-Portnoy, Tamar Parush, 2001-01-01 An important tool for scientific study in any field is a formal language in which the phenomena can be described and hypotheses formulated In this book a formal notation is developed for the description of the cognitive structure of arguments The analyses based on this notation are more fine grained than the analyses in previous attempts and they are applicable not only to arguments but to all types of moves in a discourse Further the notational system provides a basis for the description of relations between arguments and the structure of the discourse as a whole In the final chapter some empirical studies of retention of arguments in memory and of precise writing are reported based on hypotheses formulated in terms of the notational system

Language Use and Linguistic Structure. Proceedings of the Olomouc Linguistic Colloquium 2023 Janebová, Markéta, Čakányová, Michaela, Emonds, Joseph, The latest volume of OLINCO proceedings is a selected set of sixteen papers that grew from presentations at OLINCO 2023 the international Olomouc Linguistics Colloquium held at Palack University in June 2021 The papers collected here are unified by the topic of the colloquium Language Use and Linguistic Structure in that they all in one way or the other address the central questions of the study of human language They all use standard scientific methodology and theory and solidly researched empirical evidence in favor of formalized structural representations of the language system

Argument Structure and Linking Stephen Wechsler, 1991

Productivity in Argument Selection Amir Zeldes, 2012-12-06 This book centers on the idea that some verbs and other argument structure constructions have an inherently different propensity to realize lexically unfamiliar arguments independently of lexical semantic meaning This notion is explored both qualitatively using selected examples and quantitatively using large amounts of corpus data in both cases primarily from English and German

The Cambridge Handbook of Korean Linguistics Sungdai Cho, John Whitman, 2022-08-25 The Korean wave in music and film and Korea's rise to become the twelfth economic power in the world have boosted the world wide popularity of Korean language study The linguistic study of Korean with its rich syntactic and phonological structure complex writing system and unique socio historical context is now a rapidly growing research area Contributions from internationally renowned experts on the language provide a state of the art overview of key current research in Korean language and linguistics Chapters are divided into five thematic areas phonetics and phonology morphology and syntax semantics and pragmatics sociolinguistics and psycholinguistics and language pedagogy The Handbook includes cross linguistic data to illuminate the features of Korean and examples in Korean script making it suitable for advanced students and researchers with or without prior knowledge of Korean linguistics It is an essential resource for students and researchers wishing to explore the exciting and rapidly moving field of Korean linguistics

Parallel and Constraint Logic Programming Ioannis Vlahavas, Panagiotis Tsarchopoulos, Ilias Sakellariou, 2012-12-06 Constraint Logic Programming

CLP an area of extreme research interest in recent years extends the semantics of Prolog in such a way that the combinatorial explosion a characteristic of most problems in the field of Artificial Intelligence can be tackled efficiently By employing solvers dedicated to each domain instead of the unification algorithm CLP drastically reduces the search space of the problem which leads to increased efficiency in the execution of logic programs CLP offers the possibility of solving complex combinatorial problems in an efficient way and at the same time maintains the advantages offered by the declarativeness of logic programming The aim of this book is to present parallel and constraint logic programming offering a basic understanding of the two fields to the reader new to the area The first part of the book gives an introduction to the fundamental aspects of conventional logic programming which is necessary for understanding the parts that follow The second part includes an introduction to parallel logic programming architectures and implementations proposed in the area Finally the third part presents the principles of constraint logic programming The last two parts also include descriptions of the supporting facilities for the two paradigms in two popular systems ECLIPSe and SICStus These platforms have been selected mainly because they offer both parallel and constraint features Annotated and explained examples are also included in the relevant parts offering a valuable guide and a first practical experience to the reader Finally applications of the covered paradigms are presented The authors felt that a book of this kind should provide some theoretical background necessary for the understanding of the covered logic programming paradigms and a quick start for the reader interested in writing parallel and constraint logic programming programs However it is outside the scope of this book to provide a deep theoretical background of the two areas In that sense this book is addressed to a public interested in obtaining a knowledge of the domain without spending the time and effort to understand the extensive theoretical work done in the field namely postgraduate and advanced undergraduate students in the area of logic programming This book fills a gap in the current bibliography since there is no comprehensive book of this level that covers the areas of conventional parallel and constraint logic programming

Parallel and Constraint Logic Programming An Introduction to Logic Parallelism and Constraints is appropriate for an advanced level course on Logic Programming or Constraints and as a reference for practitioners and researchers in industry

The Theory and Practice of Argumentation and Debate Victor Alvin Ketcham,1914 **Structure of Argument** Annette T. Rottenberg,1997-04-01 **Teaching and Learning Argument** Richard Andrews,1995 This text advocates bringing the teaching and learning of argument to the centre of the curriculum based on the understanding that argument is essential to the development of thinking skills Its scope is broad analyzing the function of argument from early childhood education to university study

Lexical Specification and Insertion Peter Coopmans,Martin Everaert,Jane Barbara Grimshaw,2000 The papers in this volume address the general question what type of lexical specifications we need in a generative grammar and by what principles this information is projected onto syntactic configurations or to put it differently how lexical insertion is executed Many of the contributions focus on what the syntactic consequences are of

choices that are made with respect to the lexical specifications of heads The data in the volume are drawn from diverse languages among which Brazilian Portuguese Bulgarian Dutch English French German Icelandic Italian Mohawk Norwegian Polish Russian

An Introduction to Deductive Argument Analysis Anthony Waters,1982

Freedom, Recognition and Non-Domination Fabian Schuppert,2013-08-26 This book offers an original account of a distinctly republican theory of social and global justice The book starts by exploring the nature and value of Hegelian recognition theory It shows the importance of that theory for grounding a normative account of free and autonomous agency It is this normative account of free agency which provides the groundwork for a republican conception of social and global justice based on the core ideas of freedom as non domination and autonomy as non alienation As the author argues republicans should endorse a sufficientarian account of social justice which focuses on the nature of social relationships and their effects on people s ability to act freely and realize their fundamental interests On the global level the book argues for the cosmopolitan extension of the republican principles of non domination and non alienation within a multi level democratic system In so doing the book addresses a major gap in the existing literature presenting an original theory of justice which combines Hegelian recognition theory and republican ideas of freedom and applying this hybrid theory to the global domain
