Hydropower bioenergy and geothermal energy are mature technologies that contribute about 5-6% to primary energy supply. Solar, wind, and other new renewables have experienced rapid technology development but as yet they represent only a small share. This work examines policies and measures that have been introduced in IEA countries to increase the cost-effective deployment of renewables, reviews the objectives behind these policies, and evaluates the results. The aim is to identify best practices in order to assist governments in making future policy decisions.

AI and IOT in Renewable Energy Rabindra Nath Shaw, Nishad Mendis, Saad Mekhilef, Ankush Ghosh, 2021-05-12. This book presents the latest research on applications of artificial intelligence and the Internet of Things in renewable energy systems. Advanced renewable energy systems must necessarily involve the latest technology like artificial intelligence and Internet of Things to develop low-cost, smart, and efficient solutions. Intelligence allows the system to optimize the power, thereby making it a power-efficient system, whereas Internet of Things makes the system independent of wire and flexible in operation. As a result, intelligent and IOT paradigms are finding increasing applications in the study of renewable energy systems. This book presents advanced applications of artificial intelligence and the internet of things in renewable energy systems development. It covers such topics as solar energy systems, electric vehicles, etc. In all these areas, applications of artificial intelligence methods such as artificial neural networks, genetic algorithms, fuzzy logic, and a combination of the above, called hybrid systems, are included. The book is intended for a wide audience ranging from the undergraduate level up to the research academic and industrial communities engaged in the study and performance prediction of renewable energy systems.
