

Text, Texture and Cohesion (Reference, Substitution, Ellipsis)

Text, Texture and Cohesion

Text:

The word 'text' is exploited in linguistics to refer to any passage, spoken or written, of whatever length, that does construct a unified whole. According to Widdowson (1979), "a text is a collection of formal objects held together by patterns of equivalence or frequencies or by cohesive devices".

A text may be prose or verse, dialogue or monologue. It may be anything from a single proverb to a whole play, from a momentary cry for help to an all-day discussion on a committee. That is, geographical length is not important for a text, for example –

- a. A single word: "DANGER" on a warning sign.
- b. A stretch of language even though not a sentence: "NO SMOKING" printed on a wall.
- c. Plays or novels: *Hamlet*, *Great Expectations*, etc.

A text is a unit of language in use. It is not a lexico-grammatical unit like a clause or a sentence, and it is not defined by size. We cannot mathematically count that a text has two or three or... sentences. A text does not consist of sentences. It is realized by, or encoded in sentences.

A text is best regarded as a semantic unit, a unit not of form but of meaning. Thus it is related to a clause or sentences not by size but by realization, the coding of one symbolic system in another.

Texture:

The concept of texture is entirely appropriate to express the property of 'being a text'. This characteristic of a text distinguishes it from something that is not a text. The fact that a text functions as a unity with respect to its environment derives from this 'texture'. If a passage of English containing more than one sentence is perceived as a text, there will be certain linguistic features present in the passage which can be identified as contributing to its total unity and giving it texture.

For example –

if we find the following instructions in the cooking book;
Wash and core six cooking apples. Put *them* into a fireproof dish.
