The First Sacrifice:

Sacrifice Robert Petkovsek, Bojan Zalec, 2018 Various fundamental and vital areas and aspects of human life are in some way crucially interwoven with the ideas, ideals and practices of sacrifice. As an attention-grabbing example of how importantly sacrifice may influence society, let us mention suicide terrorist attacks that by spreading sorrow, panics and fear have changed the face of today's world. But the importance of sacrifice reaches broader and deeper. The authors of this book show that it is connected with the origins of human culture and its transformations. This interdisciplinary book brings the results of the research in the areas of humanities and social science. Various aspects of sacrifice are considered and connected. The book is an important contribution to the formation of a culture of sacrifice and offering appropriate for the modern world. Professor Robert Petkovsek is the Dean of the Faculty of Theology, University of Ljubljana. Research Professor Bojan Zalec is the Head of the Institute of Philosophy and Social Ethics at the Faculty of Theology, University of Ljubljana.

What Happened on the Cross Nick Peros, 2020-08-07 *What Happened on the Cross* offers a new and biblical understanding of how salvation was accomplished upon the cross, showing that the Penal Substitution view, common since the 1500s, does not have a biblical basis and also showing that the Christus Victor understanding is inadequate. The book is founded upon the understanding that Jesus Christ is the Second Adam and that is the foundation of how we are to understand how salvation was accomplished. Both the shedding of blood and death were essential in the accomplishment of salvation, and *What Happened on the Cross* shows why these were essential. Using over 740 Scripture verses to make its argument, the book gives a comprehensive picture from Genesis to Revelation of the many aspects involved in the accomplishment of salvation, above all showing clearly that the cross had nothing to do with punishment for sins; our sins were never punished upon the cross; rather, our sins were forgiven. Understanding how salvation was accomplished upon the cross and that it was about forgiveness, not punishment, both exalts God and his greatness, demonstrates his perfect love and justice, as well as liberates our hearts towards him.

Manual of Biblical Archaeology: cont. 55. The sacrifice offered at the consecration of the Priests Carl Friedrich Keil, 1887

Coevolution William H. Durham, 1991 Charles Darwin's *On the Origins of Species* had two principal goals: to show that species had not been separately created and to show that natural selection had been the main force behind their proliferation and descent from common ancestors. In *Coevolution*, the author proposes a powerful new theory of cultural evolution that is of the descent with modification of the shared conceptual

systems we call cultures that is parallel in many ways to Darwin's theory of organic evolution. The author suggests that a process of cultural selection or preservation by preference driven chiefly by choice or imposition depending on the circumstances has been the main but not exclusive force of cultural change. He shows that this process gives rise to five major patterns or modes in which cultural change is at odds with genetic change. Each of the five modes is discussed in some detail and its existence confirmed through one or more case studies chosen for their heuristic value, the robustness of their data and their broader implications. But Coevolution predicts not simply the existence of the five modes of gene-culture relations; it also predicts their relative importance in the ongoing dynamics of cultural change in particular cases. The case studies themselves are lucid and innovative reexaminations of an array of oft-pondered anthropological topics: plural marriage, sickle cell anemia, basic color terms, adult lactose absorption, incest taboos, headhunting and cannibalism. In a general case, the author's goal is to demonstrate that an evolutionary analysis of both genes and culture has much to contribute to our understanding of human diversity, particularly behavioral diversity, and thus to the resolution of age-old questions about nature and nurture, genes and culture.
