Smaller Academic Library:

Planning Program for Small Academic Libraries P. Grady Morein, 1980 **Measuring the Book Circulation Use of a Small Academic Library Collection** Mary Kane, Mary Kane Trochim, Arthur H. Miller, William M. K. Trochim, Association of Research Libraries. Office of Management Studies, 1985 [Operations Handbook for the Small Academic Library](#) Gerard B. McCabe, 1989-09-26 Gerard McCabe's *Operations Handbook for the Small Academic Library* fills a real need. It should be of substantial benefit to many librarians working in such settings. The editor has done a good job of identifying the issues, finding a range of skilled practitioners to write intelligently and succinctly about those issues, and arranging and presenting the material in a straightforward fashion. The information and advice is consistently sound and reliable, which makes this a text that can be recommended as a solid manual for those responsible for the management of small academic libraries. *Wilson Library Bulletin*. Designed as a companion volume to *The Smaller Academic Library: A Management Handbook*. Greenwood Press, 1988. This book outlines specific suggestions for the efficient day-to-day operation of the small institution that has limited resources yet often must serve a broad cross-section of academic and community interests. Written by experienced library management specialists, it is intended for library staffs at all levels as well as other readers who have an interest in libraries and their operation. Administrative functions including cost data presentation and the use of bibliographic networks are examined in the first several chapters. The authors next look at personnel issues and present guidelines on the design of jobs, recruitment, and selection of librarians, staff training, and the employment of student workers. Circulation: the interlibrary loan and off-campus library services are discussed in detail, and practical advice is given on the selection and utilization of technical services. A section on technology shows how to integrate new services and technology in the smaller institution and provides information on microcomputers, software, CD-ROM, and electronic book ordering. Other topics considered are the material selection process, periodical acquisition, and budget control; the selection of monographs and issues; library facility planning, such as interior design, furniture selection, and the utilization of space. The volume concludes with a bibliographic essay. Clear and readable, this book offers a systematic approach to revitalizing the diverse services, functions, and daily routines that make up the operation of the small academic library.

Organizing Library Collections Gretchen L. Hoffman, 2019-08-05. Libraries organize their collections to help library users find what they need. Organizing library collections may seem like a straightforward and streamlined process, but it can be quite complex, and there is a large body of theory and practice that shape and support this work. Learning about the organization of library collections can be challenging. Libraries have a long history of organizing their collections; there are many principles, models, standards, and tools used to organize collections, and theory and practice are changing constantly. Written for beginning library science students, *Organizing Library Collections: Theory and Practice* introduces the theory and practice of organizing library collections in a clear, straightforward, and understandable way. It explains why and how libraries organize their collections and how theory

and practice work together to help library users. It introduces basic cataloging and metadata theory, describes and evaluates the major cataloging and metadata standards and tools used to organize library collections, and explains in general how all libraries organize their collections in practice. Yet this book not only introduces theory and practice in general, it introduces students to a wide range of topics involved in organizing library collections. This book explores how academic, public school, and special libraries typically organize their collections and why. It also discusses standardization and explains how cataloging and metadata standards and policies are developed. Ethical issues also are explored, and ethical decision making is addressed. In addition, several discussion questions and class activities reinforce concepts introduced in each chapter.

Students should walk away from this book understanding why and how libraries organize their collections. **Cases on Research Support Services in Academic Libraries** Fernández-Marcial, Viviana, González-Solar, Llarina, 2020-08-28

Academic libraries have traditionally had two key functions: to support teaching and to support research. In an evolving and competitive university environment, along with the emergence of various technologies and substantial changes in scientific communication, university management has reached a turning point. Academic libraries are facing a paradigm shift in the role they need to play to achieve the research objectives of universities. Research support services in academic libraries have evolved as a response to these changes. They are heterogeneous, adapt to their university culture, adopt different points of view, take different approaches in their organizational structures, and include a diverse catalog of activities. Having an overview of different experiences will allow libraries to adopt best practices, redefine services, and even establish new management and collaboration models. *Cases on Research Support Services in Academic Libraries* is a critical scholarly resource that uses case studies to systematize the experiences of research support services in academic libraries for the support of higher education faculty. The cases focus on such items as the role of technology and its impact, as well as how these services help to improve the excellence of universities. Featuring a wide range of topics such as library services, data management, and open science, this book is ideal for librarians, academicians, professionals, researchers, and students.
