Urban Configurations:

New Urban Configurations Nicola Marzot, Meta Berghauer Pont, 2014-04-15 Urban areas have been caught up in a turbulent process of transformation over the past 50 years and changes have been rapid with issues such as mobility nature water management energy use and public space featuring prominently In each Olympic year since 1988 the Faculty of Architecture at Delft University of Technology has held an international conference focusing on the connection between research and design exploring the field of tension between science technology and art This book presents the proceedings of the latest in this series of conferences New Urban Configurations held in Delft the Netherlands in October 2012 in collaboration with the European Association for Architectural Education EAAE and the International Seminar on Urban Form ISUF This edition of the conference discussed the role and critical potential of the architectural project in the transformation process of cities and territories that leads to new urban configurations The publication contains all 140 accepted papers and a selection of the keynote lectures presented at the conference The papers have been grouped into five main themes innovation in building typology infrastructure and the city complex urban projects green spaces and delta urbanism Four of these major topics are further divided into several subtopics This book will be of interest to everyone involved in designing building thinking about as well as managing the urban landscape and territory

Civil Defense Implications of Current and Future Urban Configurations Henry L. Woltman, E. C. Goodrow, 1963 This report examines the possibilities of vulnerability reduction through long term changes in urban form and structure in the light of projected trends in economic and social forces affecting future urban development Urban decentralization is likely to continue in the future and technological change may permit deliberate acceleration of this trend toward sprawling urban regions Various conceptual and empirical urban forms are reducible to a few basic types The vulnerability characteristics of the different forms are mixed but the galaxy and dispersed sheet forms are generally best suited to civil defense purposes These are similar to the forms that future urban regions are expected to take A variant of the dispersed sheet form is considered the most advantageous it would provide compact urban communities separated by extensive open spaces devoted to nonurban land uses within future metropolitan areas In addition efforts to increase the hardness of urban structures are desirable An increased proportion of high hardness structural types should be encouraged in the building mix This increase should take the form mainly of high hardness residential structures dispersed singly or in clusters throughout residential areas Indirect methods are considered by which progress toward these objectives might be assisted through various ongoing Federal and state governmental activities Author
