Eye movement-related brain activity during perceptual and cognitive processing Andrey R. Nikolaev, Sebastian Pannasch, Junji Ito, Artem Belopolsky, 2014-09-23 The recording and analysis of electrical brain activity associated with eye movements has a history of several decades While the early attempts were primarily focused on uncovering the brain mechanisms of eye movements more recent approaches use eye movements as markers of the ongoing brain activity to investigate perceptual and cognitive processes This recent approach of segmenting brain activity based on eye movement behavior has several important advantages First the eye movement system is closely related to cognitive functions such as perception attention and memory This is not surprising since eye movements provide the easiest and the most accurate way to extract information from our visual environment and the eye movement system largely determines what information is selected for further processing The eye movement based segmentation offers a great way to study brain activity in relation to these processes Second on the methodological level eye movements constitute a natural marker to segment the ongoing brain activity This overcomes the problem of introducing artificial markers such as ones for stimulus presentation or response execution that are typical for a lab based research This opens possibilities to study brain activity during self paced perceptual and cognitive behavior under naturalistic conditions such as free exploration of scenes Third by relating eye movement behavior to the ongoing brain activity it is possible to see how perceptual and cognitive processes unfold in time being able to predict how brain activity eventually leads to behavior This research topic illustrates advantages

of the combined recording and analysis of eye movements and neural signals such as EEG local field potentials and fMRI for investigation of the brain processes in humans and animals The contributions include research papers methodology papers and reviews demonstrating conceptual and methodological achievements in this rapidly developing field Proceedings of the 1986 IEEE International Conference on Systems, Man and Cybernetics ,1986 **Cosmic Research** ,1988

Proceedings, the Second International Conference on Industrial & Engineering Applications of Artificial Intelligence & Expert Systems ,1989 *Automatic Object Recognition* Hatem N. Nasr,1991 **Aging and Human Visual Function** Robert Sekuler,1982 **Proceedings of the National Academy of Sciences of the United States of America** National Academy of Sciences (U.S.),2001 **Ophthalmic Literature** ,1976 *Journal of the American Optometric Association* American Optometric Association,1983 **Scientific and Technical Books and Serials in Print** ,1984 Advanced Image and Video Communications and Storage Technologies Naohisa Ohta,Heinz U. Lemke,Jean-Claude Lehureau,1995 **Publications** Mental Health Research Institute,1956 **Applied Concepts in Vision Therapy, with Accompanying Disk** Leonard J. Press,1997 This comprehensive text on vision therapy consolidates information that is currently scattered among many sources including hot topics such as sports vision and vision rehabilitation Contains an entire section on practice management It features key terms clinical pearls review questions case studies and high quality illustrations The book comes with a disk in Rich Text Format RTF which is compatible with most popular IBM and Macintosh word processing systems The disk contains more than 100 techniques and practice management communications that can be modified to individual patients and printed out for use in practice
