be used to choose the types of questions and what factor you want to use This project has three timing options In Tutorial 1 3 you will build Bank Code game The storage box is locked and can only be opened if you enter the correct digit combination Combinations can be 2 to 4 non repetitive digits range of digits from 1 to 9 After a guess is given you will be notified of how many digits are right and how many digits are in the right position Based on this information you will give another guess You continue to guess until you get the right combination or until you stop the game In Tutorial 1 4 you will build Horse Racing game This is a simple game Up to 10 horses will race to the finish line You guessed two horses that you thought could win the race By clicking on the Start button the race will start All horses will race speed to get to the finish line In chapter two you will learn the basic concepts of classes and objects Next it will demonstrate how to define class and type of enumeration which shows how both are used in the application In Tutorial 2 1 you will create a two level application that uses a form to pass input user to the People class The form class is the level of representation and the People class is the middle level You will add controls to the form so people can enter ID last name and their height When the user clicks the Save button the code will assign input values to the People class properties Finally you will display the People object on a label Figure below shows the form after the user clicks the Save button In Tutorial 2 2 you will add a parameterized constructor to the People class The application will ask the user to enter values which will then be passed to the People constructor Then the application will display the values stored on the People object In Tutorial 2 3 you will create an application that utilizes enumeration type The user will choose one type of account that is listed in a ListBox control and what he chooses is then displayed in a Label control In Tutorial 2 4 you will create a simple Bank application This application has one class BankAcc and a startup form In Tutorial 2 5 you will improve the simple Bank application by implementing the following two properties in the BankAcc class TotalDeposit Total money saved in current account TotalWithdraw Total funds that have been withdrawn from current account In Tutorial 2 6 you will create an application to calculate the time needed for a particular aircraft to reach takeoff speed You will also calculate how long the runway will be required For each type of aircraft you are given 1 the name of the aircraft 2 the required take off speed feet sec and 3 how fast the plane accelerates feet sec2 In Tutorial 2 7 you will provide a number of programming training for those who want to improve their programming skills Your task here is to write an object oriented application so that training manager can display and edit the training services offered There are several training categories 1 Application Development 2 Database 3 Networking and 4 System Administration The training itself consists of 1 title 2 training days 3 category and 4 cost Create a class named Training that contains this information along with its properties and a ToString method In chapter three several tutorials will be presented to build more complex projects You will build them gradually and step by step In Tutorial 3 1 you will build Catching Ball game The bird flew and dropped ball from the sky User is challenged to position man under the fallen ball to catch it In Tutorial 3 2 you will build Smart Tic Tac Toe game The aim of this game is to win the game on a 3 x 3 grid with the victory of three identical symbols X or O on horizontal

diagonal or vertical lines The players will play alternately In this game given two game options player 1 against player 2 or human player against computer A smart but simple strategy will be developed for computer logic to be a formidable opponent for human In Tutorial 3 3 you will build a Matching Images game Ten pairs of images hidden on the game board The object of the game is to find image pairs In Two Players mode players will get turns in turn In One Player mode there are two options to choose from Playing Alone or Against Computer When Play Alone option is selected the player will play alone without an opponent If Against Computer option is selected then the level of computer intelligence is given with several levels according to the level of difficulty of the game In Tutorial 3 4 you will build Throwing Fire program This program can be played by two human players or human player versus computer In chapter four tutorials will be presented to build two advanced projects You will build them gradually and step by step In Tutorial 4 1 you will build Roasted Duck Delivery simulation In this simulation a number of decisions are needed The basic idea is to read the order by incoming telephone and tell the delivery scooter to go to the location of the order You also need to make sure that you always provide a roasted duck ready to be transported by the delivery scooter The delivery area is a 20 by 20 square grid The more roasted duck is sold the more profit it gets In Tutorial 4 2 you will build a Drone Simulation In this simulation you control both vertical and horizontal thrusters to maneuver the ride to the landing pad You will adjust the landing speed so that it is slow enough so that no accident occurs **Visual Basic 5 Night School** Greg M.
