Visual Pattern Analyzers:

Visual Pattern Analyzers Norma Van Surdam Graham, 2001-09-20 The visual system must extract from the light that falls on the retina meaningful information about what is where in our environment At an early stage it analyzes the incoming sensory data along many dimensions of pattern vision e g spatial frequency orientation velocity eye of origin Visual Pattern Analyzers provides a definitive account of current knowledge about this stage of visual processing Nowhere else can such a comprehensive summary of the lower level pattern analyzers be found The book's emphasis is on psychophysical experiments measuring the detection and identification of near threshold patterns and the mathematical models such as multidimensional signal detection theory used to draw inferences from such experimental results but neurophysiological evidence is presented and compared critically to the psychophysical evidence Introductory material on psychophysical methods signal detection theory and the mathematics of Fourier analysis is given in order to make the book more accessible to all who are interested in the lower or higher levels of visual perception This volume will be of great value to researchers and graduate students in the fields of vision and perception Within the scientific community there is wide interest in the visual system and the book will be of use to investigators in many fields including psychophysics neuroscience ophthalmology and optics computer science and cognitive and experimental psychology

Statistical Learning and Pattern Analysis for Image and Video Processing Nanning Zheng, Jianru Xue, 2009-07-25 Why are We Writing This Book Visual data graphical image video and visualized data affect every aspect of modern society The cheap collection storage and transmission of vast amounts of visual data have revolutionized the practice of science technology and business Innovations from various disciplines have been developed and applied to the task of designing intelligent machines that can automatically detect and exploit useful regularities patterns in visual data One such approach to machine intelligence is statistical learning and pattern analysis for visual data Over the past two decades rapid advances have been made throughout the field of visual pattern analysis Some fundamental problems including perceptual grouping imagesegmentation stereomatching object detection and recognition and motion analysis and visual tracking have become hot research topics and test beds in multiple areas of specialization including mathematics neuron biometry and cognition A great diversity of models and algorithms stemming from these disciplines has been proposed To address the issues of ill posed problems and uncertainties in visual pattern modeling and computing researchers have developed rich toolkits based on pattern analysis theory harmonic analysis and partial differential equations geometry and group theory graph matching and graph grammars Among these technologies involved in intelligent visual information processing statistical learning and pattern analysis is undoubtedly the most popular and important approach and it is also one of the most rapidly developing fields with many achievements in recent years Above all it provides a unifying theoretical framework for intelligent visual information processing

applications **Progress in Pattern Recognition, Image Analysis, Computer Vision, and Applications** Eduardo Bayro-Corrochano, Jan-Olof Eklundh, 2009-11-16 The 14th Iberoamerican Congress on Pattern Recognition CIARP 2009 C gresoIberoAmericano de Reconocimiento de Patrones formed the latest of a now long series of successful meetings arranged by the rapidly growing Iberoamerican pattern recognition community The conference was held in Guadalajara Jalisco Mexico and organized by the Mexican Association for Computer Vision Neural Computing and Robotics MACVNR It was sponsored by MACVNR and several other Iberoamerican PR societies CIARP 2009 was like the previous conferences in the series supported by the International Association for Pattern Recognition IAPR CIARP 2009 attracted participants from all over the world presenting state of the art research on mathematical methods and computing techniques for pattern recognition computer vision image and signal analysis robot vision and speech recognition as well as on a wide range of their applications This time the conference attracted participants from 23 countries 9 in Iberoamerica and 14 from other parts of the world The total number of submitted papers was 187 and after a serious review process 108 papers were accepted all of them with a scientific quality above overall mean rating Sixty four were selected as oral presentations and 44 as posters Since 2008 the conference is almost single track and therefore there was no real grading in quality between oral and poster papers As an acknowledgment that CIARP has established itself as a high quality conference its proceedings appear in the Lecture Notes in Computer Science series Moreover its visibility is further enhanced by a selection of a set of papers that will be published in a special issue of the journal Pattern Recognition Letters
