Kraan,Roel J. in 't Veld,2012-10-17 This volume is the result of a collective effort made by its authors to reason and write about environmental policy from an empirical rather than from a prescriptive perspective Since the authors like most people care about the environment and as professional economists or political scientists have some expertise to offer in the area of policy design it was not always easy for them to keep on the intended track Whereas they knew that it is unusual to follow a strictly empirical approach in such a practical field as environmental policy they discovered only during the effort what kind of difficulties would be encountered Moreover they learned that it is sometimes necessary to reason normatively in order to catch essential features of empirical reality As it turns out moral notions cannot entirely be neglected in political life The predominance of homo economicus is not absolute We feel that the effort has been worthwhile and deserves to be repeated

and expanded It has been a truly cooperative project and we are very grateful to all authors for their willingness to contribute Special gratitude we owe to Frans van Nispen and Annemarie Rima Frans van Nispen has assisted us in every conceivable way during the preparation of this book
