Monitoring, Simulation, Prevention and Remediation of Dense and Debris Flows III D. De Wrachien, 2010 Debris and hyper concentrated flows are among the most destructive of all water related disasters They affect both rural and urban

areas in a wide range of morphoclimatic environments and in recent years have attracted more and more attention from the scientific and professional communities and concern from the public due to the death toll they claim. The increased frequency of these natural hazards coupled with climatic change predictions and urban development suggests that they are set to worsen in the future. This book contains the edited versions of the papers presented at the third International conference on Monitoring Simulation Prevention and Remediation of Dense and Debris Flows. The Conference brought together engineers, scientists and managers from across the globe to discuss the latest scientific advances in the field of dense and hyper concentrated flows as well as to improve models, assess risk, develop hazard maps based on model results and to design prevention and mitigation measures. The papers have been organised into the following sections: Debris Flow Modelling, Debris Flow Triggering, Risk Assessment and Hazard Mitigation, Sediment Transport and Debris Flow Monitoring Analysis.
