Universal Compression And Retrieval:

Universal Compression and Retrieval R. Krichevsky, 2013-03-09 Objectives Computer and communication practice relies on data compression and dictionary search methods They lean on a rapidly developing theory Its exposition from a new viewpoint is the purpose of the book We start from the very beginning and finish with the latest achievements of the theory some of them in print for the first time The book is intended for serving as both a monograph and a self contained textbook Information retrieval is the subject of the treatises by D Knuth 1973 and K Mehlhorn 1987 Data compression is the subject of source coding It is a chapter of information theory Its up to date state is presented in the books of Storer 1988 Lynch 1985 T Bell et al 1990 The difference between them and the present book is as follows First We include information retrieval into source coding instead of discussing it separately Information theoretic methods proved to be very effective in information search Second For many years the target of the source coding theory was the estimation of the maximal degree of the data compression This target is practically bit today The sought degree is now known for most of the sources We believe that the next target must be the estimation of the price of approaching that degree So we are concerned with trade off between complexity and quality of coding Third We pay special attention to universal families that contain a good compressing map for every source in a set Digital-Forensics and Watermarking Yun-Qing Shi, Hyoung Joong Kim, Fernando
