Unsafe At Any Altitude:

Unsafe at Any Altitude Richard Francis Schaden, 2021-08-31 Upon opening you might find this book appears to be my autobiography But I see myself as the messenger or vehicle that carries the story starting with experiential learning a concept that had become a way of life juxtaposed next to academia and formal training This is a story about crossing the disciplines of engineering and law to create safer transportation ultimately more specifically in the sky Product liability law helps force engineering design to truly serve the needs of man Formally I was educated as an aeronautical engineer airplane pilot and next a lawyer It would seem to an outsider that these are pretty complicated disciplines to mix Yet from flight level 410 that is 41 000 feet metaphorically standing away from the nitty gritty details it all integrates quite well All of law can be summarized as having three basic elements plus one important umbrella 1 a person s duty to do no harm to another and act as a reasonably under the circumstance of which failure to comply is referred to as committing a tort 2 a person s duty to follow the rules of law of which failure to comply is referred to as a crime and 3 people s promises to do something such as transfer property provide a service or complete some other transaction All three of three are under the umbrella of fairness That is don t ask for remedies to which you are not entitled or you could say don t go to court with dirty hands Now let s look at engineering I believe that it is fair to define good engineering as the task of designing and constructing items to safely and effectively serve the needs of humankind This concept fits nicely juxtaposed to the above basic concepts of law Airbags collapsible steering wheels padded dashboards seat belts and shoulder harnesses were not the result of engineering by the auto companies but were the result of product liability lawsuits It could be said that these items were engineered in the courthouse Law has saved a lot of lives The courtroom has proven to be a great form for evaluating design and an effective way to force change for the safety Exculpatory In this story some names are real and some are made up for reasons that may be obvious Some facts are real and others are just different as seen through the lens of different people or as remembered differently Notwithstanding the science and technology is accurate

Unsafe at Any Altitude Susan B. Trento, Joseph John Trento, 2007 This groundbreaking work of investigative journalism goes behind the scenes at our nation s airports and penetrates the government to paint a picture of a Transportation Security Administration that is remarkably inept and reveals the great lengths that U S air carriers and their lobbyists have gone in order to make certain that serious airline security has not been instituted in this country The authors also tell the secret histories of security failures along a continuum that led directly to 9 11 the hijackings of passenger jets to Cuba decades ago Iran Contra Hezbollah s bombing of the U S Marine barracks in Beirut its hijacking of TWA Flight 847 and the Pan Am Flight 103 Lockerbie tragedy These dramatic riveting stories expose lessons from our nation s history that we still fail to heed Unsafe at Any Altitude also tells the breathtaking story of the Bush Administration s efforts to limit the political fallout from 9 11 by scapegoating others
