Unquiet Landscape:

Unquiet Landscape Christopher Neve, 2020-07-09 Christopher Neve's classic book is a journey into the imagination through the English landscape. How is it that artists by thinking in paint have come to regard the landscape as representing states of mind? Painting says Neve is a process of finding out and landscape can be its thesis. What he is writing is not precisely art history; it is about pictures about landscape and about thought. Over the years he was able to have discussions with many of the thirty or so artists he focuses on; the inspiration for the book having come from his talks with Ben Nicholson and he has immersed himself in their work, their countryside, their ideas. Because he is a painter himself and an expert on 20th century art, Neve is well equipped for such a journey. Few writers have conveyed more vividly the mixture of motives, emotions, unconscious forces and contradictions which culminate in the creative act of painting. Each of the thirteen chapters has a theme and explores its significance for one or more of the artists. The problem of time, for instance, is considered in relation to Paul Nash, God in relation to David Jones, music to Ivon Hitchens, hysteria to Edward Burra, abstraction to Ben Nicholson, the spirit in the mass to David Bomberg. There are also chapters about painters' ideas on specific types of country, about Eric Ravilious and the chalk landscape, Joan Eardley and the sea, and Cedric Morris and the garden.

Physical Geography Richard H. Bryant, 2013-09-11 *Physical Geography Made Simple* focuses on developments in physical geography including advancements in the study of landforms, weather, climate, water, soils, plants, and animals. The book first offers information on rocks and relief, weathering, slopes, and rivers, and drainage basins. Topics include rock structures and landforms, crustal structure and movement, physical and chemical weathering, measurement and description of slopes, and transport, erosion, and deposition. The manuscript then ponders on glacial and periglacial landforms and desert and tropical landforms. The publication takes a look at coastal features, landscape development, and the atmosphere and its energy. The manuscript also elaborates on moisture in the atmosphere, air motion, general circulation, and weather. Discussions focus on fronts, weather prediction, planetary wind belts, pressure variations, upper air motion, adiabatic processes, and evaporation and condensation. The text is a valuable reference for geographers and readers interested in physical geography.
