

Upper Atmosphere

The Earth's atmosphere has four primary layers: the troposphere, stratosphere, mesosphere, and thermosphere. These layers protect our planet by absorbing harmful radiation.

Aeronomy of Ice in the Mesosphere (AIM)

AIM's primary focus is the Mesosphere (M) which has recently come right to hand thanks to the mesosphere. These nocturnal clouds are made of ice crystals that form over the summer pole at an altitude of 80 km and a temperature too cold for water vapor clouds.

Thermosphere

85-550 Miles

In the Thermosphere, molecules of oxygen and nitrogen are ionized by solar radiation. This ionization produces free electrons and ions, creating the ionosphere that shields the Earth from incoming solar radiation. The Thermosphere increases in temperature with altitude because the atoms, oxygen and nitrogen cannot collide to cool the this absorption.

Mesosphere

50-85 Miles

During the mesosphere, it is possible to see meteoroids being torn apart in the Earth's atmosphere and they burn (change their orbits). There the temperature is responsive to small changes in atmospheric density and composition. It could provide clues to climate, and it may affect global climate and contribute to a change in temperature in a water composition in the atmosphere.

Stratosphere

10-50 Miles

The lower layer has within the mesosphere and stratosphere shields from the Sun.

Troposphere

0-10 Miles

The Troposphere is the layer of the Earth's atmosphere where all human activity takes place.

Ionosphere

The ionosphere is a layer of plasma formed by the ionization of atomic oxygen and nitrogen by highly energetic ultraviolet and X-ray solar radiation. The ionosphere extends from the bottom of the stratosphere up to the mesosphere. This layer varies daily in the daytime compared to solar radiation causes the ionization of the atoms, but can reflect waves as far as the ionosphere. However, from upper atmospheric layers are still mostly neutral, with only one in a million particles becoming charged daily. At night, the ionosphere usually collapses in the dark, but it can be observed with the stars in the Thermosphere. There are still small amounts of charged atoms caused by cosmic radiation.

Balloons, Balloons, and Satellites

AIM scientists use balloons to collect in-situ measurements in the atmosphere. However, the mesosphere and thermosphere are too high for balloons to reach, so scientists use instruments on sounding balloons and satellites to gather more detailed measurements of the upper atmosphere.

Communication

A unique property of the ionosphere is that it can reflect short-wave radio waves, enabling communication over great distances by "bouncing" signals off the actual atmosphere layer. Variability of the ionosphere can interrupt satellite communication, such as errors in GPS signals for commercial air navigation. During solar storms, this layer can even shut down communication between ground stations and satellites.

Nocturnal Clouds in the Mesosphere

Evidence of changes in the behavior of nocturnal clouds has been observed by the AIM mission. Recent data show dramatically less ice ice content, leading scientists to speculate about changes in weather conditions and pole-to-pole atmospheric circulation.

AIMMS

The Ballot Army for Radiation-Ball Balloons (BAIMMS) is a balloon-based mission to expand the measurements of NASA's TIMP spacecraft. BAIMMS seeks to measure the propagation of radio waves through the ionosphere during two multi-balloon campaigns operated in the Southern Hemisphere.

The Upper Atmosphere in Motion Colin O. Hines, 1974 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 18 I am advised that a preface though not necessary would at least be conventional Since this provides the one opportunity for conventionality that the volume as a whole opens up it would be churlish of me to decline A preface normally includes I am told an indication of both the reason that underlies the volume s very existence and the individuals to whom the volume is directed But part of the reason for the volume s existence lies strange though it may seem in communicating the reason for the volume s existence Since prefaces generally go unread I would be remiss if I attempted that communication here Instead I have left the attempt to the Introduction and Key which I believe has a better chance of being read Let us be willing to settle for the moment on the truly fundamental fact that the volume was prepared because I was prepared to prepare it and a publisher was prepared to publish it As to the intended readers they too must wait for their identification in the Introduction and Key unless they are willing to settle at this point on an identification as those who might be ready to read what I was prepared to prepare *The Upper Atmosphere* S.A.
