Urolithiasis Research:

Urolithiasis Lynwood H. Smith, 2013-04-17 In 1968 Drs B E C Nordin and A Hodgkinson organized the First International Symposium on Urolithiasis Research in Leeds England One hundred and five participants from continental Europe Great Britain and the United States met to review their work and exchange ideas regarding the formation of urinary calculi This meeting achieved several important goals It pulled together a nidus of workers in the many scientific disciplines that relate to urolithiasis This nidus served as the seed for research growth in a complex interdisciplinary field It established a forum for continuing communication in urolithiasis research with subsequent symposia being held every 4 years The Williamsburg Symposium was the fourth in the Leeds Madrid Davos series involving 186 participants from throughout the world A stated emphasis was on clinical research under way in the field There were no invited speakers and for the first time the 41 papers that were presented orally at the meeting were selected from 184 submitted abstracts A total of 134 papers were presented in the poster sessions in the afternoons where informal exchange between interested participants and investigators could occur without the restrictions of a plenary session Virtually all areas of urolithiasis research from the most fundamental physical chemistry to clinical patterns of disease and specific modes of treatment were presented reviewed and discussed during the meeting

Renal Stone Disease Andrew P. Evan, James E. Lingeman, James C. Williams, 2007-04-13 This volume contains peer reviewed papers that were presented at the 1st Annual International Urolithiasis Research Symposium held in Indianapolis Indiana in November 2006 This conference featured a very distinguished international faculty whose present research is clearly advancing the field of stone disease This conference marked the first presentation of data on the interface between a renal stone and its tissue attachment site

Urolithiasis Research H. Fleisch, 2012-12-06 In recent years a growing interest has prompted increasing numbers of research publications and scientific conferences on the subject of urolithiasis The aims of this symposium were three a to review and integrate recent progress in major subject areas b to discuss current research developments and c to stimulate interchange between investigators in Europe and in America In a series of morning lectures invited recognized experts presented comprehensive reviews of major fields of urolithiasis research such as the physical chemistry of crystal formation the metabolism of stone forming substances and modes of therapy A special emphasis was given to general renal physiology and the renal excretion of Ca Pi Mg oxalate and urate Despite its obvious importance renal function has been relatively neglected in urolithiasis research New research results were presented by the mechanism of afternoon poster sessions This procedure permitted informal lengthy discussions between those participants especially interested and the responsible investigator himself In addition informal group discussions were organized during the evenings on an ad hoc basis In this volume both the review lectures and brief summaries of the poster presentations have been collected Interchange between European and American investigators was achieved by the direct participation of a large delegation from North America This large attendance was made possible by

the generous support of the National Institute for Arthritis Metabolism and Digestive Disease U S N I H Urolithiasis
Michael E. Moran,2013-10-30 Urolithiasis A Comprehensive History provides a historical sojourn into the varied
manifestations of kidney stone disease Utilizing historical sources and integrating classic material with new concepts this
new volume provides depth and details on stone disease not found in modern overviews on the topic This volume serves as a
very useful tool for physicians and researchers dealing with kidney stone disease Written by a renowned expert in the field
Urolithiasis A Comprehensive History is an in depth resource that heightens our medical understanding of this ancient
disease and is of great value to urologists nephrologists endocrinologists interested in stone disease Research Awards
Index ,1978 **Phosphate and Minerals in Health and Disease** Shaul G. Massry,2013-03-09 We are pleased to present
to our readers the Proceedings of the Fourth International Workshop on Phosphate and Other Minerals which was held in
Strasbourg during June 22 24 1979 It was hosted by Professor Henri Jahn Professor of Medicine and Chief Department of
Nephrology at the University of Strasbourg These Workshops have become a tradition in the scientific scene of mineral
metabolism The meetings have been providing a unique framework for close interaction between scientists from various
disciplines such as nephrologists endocrinologists bio chemists nutritionists and those dealing with bone metabolism The
Workshops also created a forum for the delivery of original information as well as state of the art presentations on exciting
topics of current interest in this evergrowing field of phosphate and mineral homeostasis The Fourth International Workshop
was attended by three hundred scientists from 15 countries including Austria Canada Denmark England France Germany
Holland Israel Italy Japan Sweden Switzerland and the United States of America The topics discussed included those dealing
with the renal handling of phos phate calcium and magnesium intermediary phosphate metabolism and phosphate
homeostasis in health and disease Two symposia were also presented one dealt with nephrolithiasis and its rela tion to
phosphate and the other with bone metabolism In addition to 22 presentations by invited speakers the Workshop provided 46
oral and 93 poster presentations selected from over 250 abstracts submitted to the Organizing Committee Renal Stone
Disease 2 Andrew P. Evan,James C. Williams,2008-11-04 Indianapolis Indiana 17 18 April 2008 Urolithiasis ,2012-12-06
The handbook on lithiasis edited by Kurt Boshamer and originally brought out in 1961 was for more than two decades the
standard work in this field for researchers and clinicians alike However our knowl edge of urolithiasis has been increased so
enormously by worldwide interdisciplinary research into the genesis of urinary calculi by the new treatment possibilities
opened up principally by advances in tech nology and by the success achieved in prevention of recurrence that it is almost
impossible to take in all the relevant journal articles books chapters monographs and proceedings It was therefore our aim in
this the first of two independent vol umes to provide a concise but comprehensive summary of current knowledge concerning
the morphology and composition of calculi epidemiology pathogenesis and diagnostic techniques The most re cent
developments are described and nothing in the world literature is ignored A second volume will cover medical therapy

operative in instrumental and noninvasive treatment and prophylaxis To have any chance of success treatment and prophylaxis must be based on knowledge of calculus formation Study of the composition of calculi has yielded important information regarding the conditions for formation and this underlines once again the great value of analysis of urinary concretions Evaluation of epidemiological data has important consequences for the individual patient **Biominerals** F.C.M.

Driessens,R.K. Verbeeck,1990-09-26 This book provides a comprehensive analysis of biominerals in particular phosphates and carbonates of calcium The book begins with a discussion of the theories of solid state chemistry and thermodynamics of ionic solid solutions and applies these theories to show how physiological constituents like sodium magnesium carbonate chloride fluoride lead or strontium influence the formation stability and solubility of calcium phosphates The results of this discussion are then applied to a critical evaluation of data regarding minerals in bone dentin and tooth enamel their formation during growth and turn over their stability under physiological conditions and their breakdown under pathological conditions These principles are also applied to pathological calcifications such as renal calculi arterial wall calcifications chondrocalcinosis dental calculus and salivary stones A similar approach is used as the authors discuss carbonations such as calcite dolomite and aragonite The book also includes an extensive analysis of the advantageous effects of magnesium supplementation The wealth of knowledge in this extensive treatise of biominerals is valuable to medical dental and ecological biologists as well as scientists and clinicians in the fields of osteoporosis bone diseases caries renal stone disease parodontology and nutrition Research Needs in Nephrology and Urology National Institute of Arthritis, Metabolism, and Digestive Diseases (U.S.),1978 *National Library of Medicine Current Catalog* National Library of Medicine (U.S.),1990

Smith,W.G. Robertson,W. Vahlensieck,2012-12-06 Urolithiasis is a common disorder which is recognised in most parts of the world and occurs in both man and animals The multifactorial nature of the problem requires an interdisciplinary approach which has always been a feature of this series of International Symposia which started in Leeds in 1968 and has progressed at four yearly intervals through Madrid Davos and Williamsburg The latest Meeting at Garmisch Partenkirchen in April 1984 involved 302 participants from all five continents The major emphasis of the Meeting was to blend the basic and clinical research on urolithiasis Comprehensive reviews of the major areas of current research were presented by invited speakers all internationally recognized experts in their fields From more than 250 submitted abstracts 18 were selected for oral presentation and the remainder presented at three afternoon poster sessions which provided an opportunity for informal and more lengthy discussions of the work on display The Meeting also included three ad hoc Evening Discussions on how to

approach various unsolved questions in the clinical and laboratory evaluation of stone patients and four Round Table Discussions involving specialists in the field who debated the theoretical aspects of stone formation in the urinary tract the measurement of inhibitory activity of urine the treatment of idiopathic stones with drugs and the nature and treatment of stones arising from urinary tract infection
