Chappell, Rob Lamb, 2017-12-21 Hydrology in Practice is an excellent and very successful introductory text for engineering hydrology students who go on to be practitioners in consultancies the Environment Agency and elsewhere This fourth edition of Hydrology in Practice while retaining all that is excellent about its predecessor by Elizabeth M Shaw replaces the material on the Flood Studies Report with an equivalent section on the methods of the Flood Estimation Handbook and its revisions Other completely revised sections on instrumentation and modelling reflect the many changes that have occurred over recent years The updated text has taken advantage of the extensive practical experience of the staff of JBA Consulting who use the methods described on a day to day basis Topical case studies further enhance the text and the way in which students at undergraduate and MSc level can relate to it The fourth edition will also have a wider appeal outside the UK by including new material on hydrological processes which also relate to courses in geography and environmental science departments In this respect the book draws on the expertise of Keith J Beven and Nick A Chappell who have extensive experience of field hydrological studies in a variety of different environments and have taught undergraduate hydrology courses for many years Second and final year undergraduate and MSc students of hydrology in engineering environmental science and geography departments across the globe as well as professionals in environmental protection agencies and consultancies will find this book invaluable It is likely to be the course text for every undergraduate MSc hydrology course in the UK and in many cases overseas too

Improved Hydrological Understanding of a Semi-Arid Subtropical Transboundary Basin Using Multiple Techniques - The Incomati River Basin Saraiva Okello, 2019-05-13 This study aims at improving the hydrological process understanding of the semi arid and transboundary Incomati river basin to enable better water management Comprehensive statistical and trend analysis of rainfall and streamflow were conducted and the Indicators of Hydrological Alteration tool was deployed to describe the streamflow regime and trends over time Land use and land cover change particularly the conversion of natural vegetation into forest plantation the expansion of irrigated agriculture and the flow regulation due to dam operation were identified as critical drivers of flow regime alteration Hydrograph separation using long term hydrochemical data at seasonal scale and hydrochemical and isotope data at event scale were performed to quantify runoff components A novel methodology to calibrate recursive digital filters using routinely collected water quality data was developed and tested in the catchment This method allows for estimation of daily baseflow

from readily available daily streamflow data Dominant runoff generation zones were mapped using the Height Above Nearest Drainage approach The hydrological model STREAM was then employed informed by the runoff generation zones mapping and the process understanding gained in the catchment as well as remote sensing data The study provides the basis for better operational water management in the catchment
