Temperature Regulation:

Regulation: Digestion, Nutrition, Excretion G. A. Kerkut, 2013-10-22 In this volume seven of the chapters deal with feeding and diet which is reasonable since insects consume an estimated 15-20% of all the world's planted crops. Many insects even have a specialized larval feeding stage that usually occupies a different ecological niche to the adult and so does not compete for the adult's food stock. Other chapters describe the means by which insects maintain their water balance, nitrogen balance, and temperature balance under a range of conditions. These involve regulation by hormonal and behavioural systems that are also described here. The 14 chapters are all extensively illustrated and referenced and therefore provide excellent summaries of current knowledge. They will be of great value to entomologists, zoologists, and biologists in general. Water Balance and Body Temperature Regulation in the Heat-stressed Cat Peter A. Doris, 1981 Psychology Michael W.
