M. Haslam,1987-05-28 Originally published in 1987 this book describes and discusses the vegetation of rivers and other watercourses in Europe with an emphasis upon distributional community and historical ecology It was firmly based upon many years of field investigations carried out by the author in various countries in the European Economic Community The main purpose of the text was to increase the understanding of river vegetation in relation to the varying physical characteristics of the watercourses The rivers of the EEC are considered in detail with an emphasis upon the influences of landscape geology climate settlement patterns water use and management and pollution This book will be of value to anyone with an interest in river botany **A Cyclopaedia of Agriculture** John Chalmers Morton,1855 The Geology of Soils and Substrata Horace Bolingbroke Woodward,1912 **SOILS** FLETCHER,1907 Soils, formation, physical and chemical characteristics and methods of improvement, including tillage, drainage & irrigation William Penn Brooks,1911 **The Encyclopaedia Britannica** ,1894 **Imperial Reference Library** ,1898 The English Cyclopaedia ,1867 **Water Meadows** Mark Everard,2005-01-01 We know a great deal about water meadows However the research behind this book has revealed an interesting facet of this knowledge A good deal of what has been written about the biodiversity and other aspects of water meadows in the past and which passes onwards as received wisdom may not be true In tracking down authoritative work upon which to base this new synthesis and appreciation it became apparent that much historic reference to water meadows has been a simple extrapolation of what some authors know of other types of wet meadow Yet water meadows are a quite distinct habitat type with characteristic biota and clear economic objectives to which no safe generalisation can be made from other forms of wet grassland
