XML AND JAVA DEVELOPING WEB APPLICATIONS(S/W□□) Hiroshi Maruyama, 2000-08-30 **Proceedings, International Symposium on Multimedia Software Engineering**, 2000 Sixty four papers from the December 2000 symposium discuss the technical aspects of specifying designing implementing and evaluating multimedia software systems The papers cover such areas as multimedia architecture requirements and design specification user interface design Internet applications intelligent systems signal and image processing and databases Topics include distributed speech recognition services hierarchical case representation for software reuse using SDL for implementing a wireless medium access control protocol image coding using SMVQ with two level block classifier and a multimedia software for the analysis and design of circuits and electronics No subject index Annotation copyrighted by Book News Inc Portland OR *Advanced Programming for the Java 2 Platform* Calvin Austin, Monica Pawlan, 2000 Choice Outstanding Academic Title 2008 The uniqueness of shape as a perceptual property lies in the fact that it is both complex and structured Shapes are perceived veridically perceived as they really are in the physical world regardless of the orientation from which they are viewed The constancy of the shape percept is the sine qua non of shape perception you are not actually studying shape if constancy cannot be achieved with the stimulus you are using Shape is the only perceptual attribute of an object that allows unambiguous identification In this first book devoted exclusively to the perception of shape by humans and machines Zygmunt Pizlo describes how we perceive shapes and how to design machines that can see shapes as we do He reviews the long history of the subject allowing the reader to understand why it has taken so long to understand shape perception and offers a new theory of shape Until recently shape was treated in combination with such other perceptual properties as depth motion speed and color This resulted in apparently contradictory findings which made a coherent theoretical treatment of shape impossible Pizlo argues

that once shape is understood to be unique among visual attributes and the perceptual mechanisms underlying shape are seen to be different from other perceptual mechanisms the research on shape becomes coherent and experimental findings no longer seem to contradict each other A single theory of shape perception is thus possible and Pizlo offers a theoretical treatment that explains how a three dimensional shape percept is produced from a two dimensional retinal image assuming only that the image has been organized into two dimensional shapes Pizlo focuses on discussion of the main concepts telling the story of shape without interruption Appendixes provide the basic mathematical and computational information necessary for a technical understanding of the argument References point the way to more in depth reading in geometry and computational vision
